XX
XX PT Novel chemically synthesized double stranded short interfering nucleic
XX acid molecule that directs cleavage of cholinergic receptor muscarinic 3
XX RNA through RNA interference, useful for treating asthma.
XX
XX PS Disclosure; SEQ ID NO 111; 84bp; English.
XX
XX The invention relates to a chemically synthesized double stranded short
XX interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
XX cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
XX where each strand of (I) has 19-23 nucleotides, and does not require the
XX presence of nucleotides having a 2-hydroxy group for mediating RNA
XX interference. (I) is useful for treating diseases e.g., asthma, allergic

CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence, (I) has increased resistance
CC towards nucleases. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

 PT Novel chemically synthesized double stranded short interfering nucleic acid molecule that directs cleavage of cholinergic receptor muscarinic 3
 PT RNA through RNA interference, useful for treating asthma.
 PT
 PS Disclosure; SEQ ID NO 10; 84pp; English.
 XX
 CC The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siRNA) molecule (I) that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 CC where each strand of (I) has 19-23 nucleotides, and does not require the
 CC presence of nucleotides having a 2-hydroxy group for mediating RNA
 CC interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

XX Novel chemically synthesized double stranded short interfering nucleic
PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.
XX
XX Disclosure; SEQ ID NO 104; 84bp; English.
XX
XX The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

XX
CC The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nucleases. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siNA molecule of the invention.

 CC The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 CC where each strand of (I) has 19-23 nucleotides, and does not require the
 CC presence of nucleotides having a 2-hydroxy group for mediating RNA
 CC interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

XX
XX Novel chemically synthesized double stranded short interfering nucleic
XX acid molecule that directs cleavage of cholinergic receptor muscarinic 3
XX RNA through RNA interference, useful for treating asthma.

XX
PS Disclosure; SEQ ID NO 136; 84pp; English.
XX
XX The invention relates to a chemically synthesized double stranded short
XX interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
XX cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
XX where each strand of (I) has 19-23 nucleotides, and does not require the
XX presence of nucleotides having a 2-hydroxy group for mediating RNA
XX interference. (I) is useful for treating diseases e.g., asthma, allergic
XX rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
XX vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
XX Alzheimer's disease or urinary incontinence. (I) has increased resistance
XX towards nuclease. Double stranded short interfering nucleic acid molecule
XX was produced by solid phase oligonucleotide synthesis method. This
XX sequence represents an example of a siRNA molecule of the invention.

PT	Novel chemically synthesized double stranded short interfering nucleic acid molecule that directs cleavage of cholinergic receptor muscarinic 3 RNA through RNA interference, useful for treating asthma.	
PS	Disclosure; SEQ ID NO 157; 84pp; English.	
CC	The invention relates to a chemically synthesized double stranded short interfering nucleic acid (siNA) molecule (I) that directs cleavage of a cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,	
CC	where each strand of (I) has 19-23 nucleotides, and does not require the presence of nucleotides having a 2-hydroxy group for mediating RNA interference. (I) is useful for treating diseases e.g., asthma, allergic rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary vasoconstriction or hypertension, emphysema, irritable bowel syndrome,	
CC	Alzheimer's disease or urinary incontinece. (I) has increased resistance towards nuclease. Double stranded short interfering nucleic acid molecule was produced by solid phase oligonucleotide synthesis method. This sequence represents an example of the invention.

PT Novel chemically synthesized double stranded short interfering nucleic

PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3

PT RNA through RNA interference, useful for treating asthma.

XX

PS Disclosure; SEQ ID NO 46; 84pp; English.

XX

XX The invention relates to a chemically synthesized double stranded short

CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a

CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,

CC where each strand of (I) has 19-23 nucleotides, and does not require the

CC presence of nucleotides having a 2-hydroxy group for mediating RNA

CC interference. (I) is useful for treating diseases e.g., asthma, allergic

CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary

CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,

CC Alzheimer's disease or urinary incontinence. (I) has increased resistance

CC towards nuclease. Double stranded short interfering nucleic acid molecule

CC was produced by solid phase oligonucleotide synthesis method. This

CC sequence represents an example of a siNA molecule of the invention.

XX Novel chemically synthesized double stranded short interfering nucleic
XX acid molecule that directs cleavage of cholinergic receptor muscarinic 3
XX RNA through RNA interference, useful for treating asthma.

XX Disclosure; SEQ ID NO 30; 84pp; English.

CC The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nucleases. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

PT Novel chemically synthesized double stranded short interfering nucleic
PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.
XX
PS Disclosure; SEQ ID NO 191; 84bp; English.
XX
CC The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

 PT Novel chemically synthesized double stranded short interfering nucleic
 PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
 PT RNA through RNA interference, useful for treating asthma.
 XX
 PS Disclosure; SEQ ID NO 44; 84pp; English.
 XX
 CC The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 CC where each strand of (I) has 19-23 nucleotides, and does not require the
 CC presence of nucleotides having a 2-hydroxy group for mediating RNA
 CC interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

 PT Novel chemically synthesized double stranded short interfering nucleic
 PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
 PT RNA through RNA interference, useful for treating asthma.
 XX
 PS Disclosure; SEQ ID NO 118; 84bp; English.
 CC The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 CC where each strand of (I) has 19-23 nucleotides, and does not require the
 CC presence of nucleotides having a 2-hydroxy group for mediating RNA
 CC interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

XX

CC The invention relates to a chemically synthesized double stranded short

CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a

CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,

CC where each strand of (I) has 19-23 nucleotides, and does not require the

CC presence of nucleotides having a 2-hydroxy group for mediating RNA

CC interference. (I) is useful for treating diseases e.g., asthma, allergic

CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary

CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,

CC Alzheimer's disease or urinary incontinence. (I) has increased resistance

CC towards nuclease. Double stranded short interfering nucleic acid molecule

CC was produced by solid phase oligonucleotide synthesis method. This

CC sequence represents an example of a siRNA molecule of the invention.

PT	Novel chemically synthesized double stranded short interfering nucleic acid molecule that directs cleavage of cholinergic receptor muscarinic 3 RNA through RNA interference, useful for treating asthma.	
PT		
PS	Disclosure; SEQ ID NO 1; 84pp; English.	
CC		
XX	The invention relates to a chemically synthesized double stranded short interfering nucleic acid (siRNA) molecule (I) that directs cleavage of a cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,	
CC	where each strand of (I) has 19-23 nucleotides, and does not require the presence of nucleotides at (I) having a 2-hydroxy group for mediating RNA interference. (I) is useful for treating diseases e.g., asthma, allergic rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary vasoostruction or hypertension, emphysema, irritable bowel syndrome, Alzheimer's disease or urinary incontinence. (I) has increased resistance towards nuclease. Double stranded short interfering nucleic acid molecule was produced by solid phase oligonucleotide synthesis method. This sequence represents an example of a siRNA molecule of the invention.

 PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
 PT RNA through RNA interference, useful for treating asthma.
 XX
 XX Disclosure; SEQ ID NO 105; 84pp; English.
 XX
 XX The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 CC where each strand of (I) has 19-23 nucleotides, and does not require the
 CC presence of nucleotides having a 2-hydroxy group for mediating RNA
 CC interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

XX
XX The invention relates to a chemically synthesized double stranded short

CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nucleases. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

 XX
 XX The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 CC where each strand of (I) has 19-23 nucleotides, and does not require the
 CC presence of nucleotides having a 2-hydroxy group for mediating RNA
 CC interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

PT Novel chemically synthesized double stranded short interfering nucleic
PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.
PS
PS Disclosure; SEQ ID NO 134; 84bp; English.

The invention relates to a chemically synthesized double stranded short interfering nucleic acid (siNA) molecule (I) that directs cleavage of a cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference, where each strand of (I) has 19-23 nucleotides, and does not require the presence of nucleotides having a 2-hydroxy group for mediating RNA interference. (I) is useful for treating diseases e.g., asthma, allergic rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary vasoconstriction or hypertension, emphysema, irritable bowel syndrome, Alzheimer's disease or urinary incontence. (I) has increased resistance towards nuclease. Double stranded short interfering nucleic acid molecule was produced by solid phase oligonucleotide synthesis method. This sequence represents an example of a siRNA molecule of the invention.

XX Novel chemically synthesized double stranded short interfering nucleic
PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.
XX
XX
PS Disclosure; SEQ ID NO 271; 84bp; English.
XX
XX The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

 XX
 XX Disclosure; SEQ ID NO 221; 84bp; English.
 PS
 XX
 CC The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 CC where each strand of (I) has 19-23 nucleotides, and does not require the
 CC presence of nucleotides having a 2'-hydroxy group for mediating RNA
 CC interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

 PT New short interfering nucleic acid molecule that directs cleavage of a
 PT cholinergic receptor muscarinic 3 RNA, useful for treating or preventing
 PT respiratory and pulmonary diseases, e.g. chronic obstructive pulmonary
 PT disease.
 XX
 XX Claim 33; SEQ ID NO 264; 184bp; English.
 PS
 XX
 CC The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siNA) molecule that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA via RNA interference
 CC (RNAi). The siNA molecule, compounds, compositions, and methods are
 CC useful for treating or preventing respiratory and pulmonary diseases,
 CC disorders, and/or conditions, including chronic obstructive pulmonary
 CC disease, asthma, allergic rhinitis, sinusitis, inflammation, allergies,
 CC cystic fibrosis, Alzheimer's disease, and/or urinary incontinence. The
 CC present sequence represents a cholinergic receptor muscarinic 3 siRNA.

XX Novel chemically synthesized double stranded short interfering nucleic
XX acid molecule that directs cleavage of cholinergic receptor muscarinic 3
XX RNA through RNA interference, useful for treating asthma.
XX Disclosure; SEQ ID NO 205; 84pp; English.
XX The invention relates to a chemically synthesized double stranded short
XX interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
XX cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
XX where each strand of (I) has 19-23 nucleotides, and does not require the
XX presence of nucleotides having a 2-hydroxy group for mediating RNA
XX interference. (I) is useful for treating diseases e.g., asthma, allergic
XX rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
XX vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
XX Alzheimer's disease or urinary incontinence. (I) has increased resistance
XX towards nuclease. Double stranded short interfering nucleic acid molecule
XX CC was produced by solid phase oligonucleotide synthesis method. This
XX sequence represents an example of a siRNA molecule of the invention.

XX
XX Isolated nucleic acid molecules having polymorphisms in known human genes
XX PT e.g. cytochrome p450 and cathepsin S useful as genetic linkage markers
XX PT for locating, identifying and characterizing the genes responsible for
XX PT disorder-related traits.
XX
XX Example 28; Page 159; 714pp; English.
XX
XX This invention relates to the sequence of an isolated nucleic acid
XX molecule comprising at least one base variation from that of a known
XX human cytochrome P450 A1 (CYP450A1), cytochrome P450 A2 (CYP450A2),
XX cytochrome P450 02B1 (CYP45002B1), adrenergic receptor beta1 (ADRB1),
XX aryl hydrocarbon (AHR), aryl hydrocarbon receptor nuclear translocator
XX (ARNT), cathepsin S (CTSS), cyclooxygenase 2 (COX2), diazepam binding
XX inhibitor (DBI), epoxide hydroxylase 2 (EPHX2), 5-lipoxygenase activating
XX protein (FLAP), glutathione-S-transferase 12 (GST12), histamine-N-methyl
XX transferase (NMNT), (kallikrein 2) KLK2, nicotinamide-N-methyl
XX transferase (NMNT), MDRP quinone oxidoreductase 2 (NQO2),
XX sulfotransferase thermolabile (STM), UDP-glucuronosyl transferase 2B4
XX (UGT2B4), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl
XX transferase (UGT2B15), urokinase receptor (uPA), multidrug resistance 1
XX (MDR1), lactotransferrin (LTF), multidrug resistance associated protein 3
XX (MRP3), orphan nuclear receptor (NR112), or acetylcholine muscarinic
XX receptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence.
XX The polymorphisms in the human genes cited in the invention are useful as
XX genetic linkage markers for locating and characterizing the genes that
XX are responsible for specific traits within the genome and eventually
XX identifying the genes responsible for a variety of disorder-related
XX traits as a result of their e.g., overexpression, constitutive
XX expression, mutation or underexpression, which may be used in diagnosing
XX and/or treating the disorders. The nucleic acid molecules comprising the
XX polymorphic sequences contained in CYP450A1, CYP450A2, CYP4502B1, AHR,
XX ANNT, EPHX2, GST12, NMNT, NQO2, NR112, STM, UGT2B4, UGT2B7, UGT2B15, AHR,
XX MOR1 and/or MDR3 are useful for screening individuals for altered drug
XX metabolism. The polymorphic sequences contained in CYP450A1, CYP450A2,
XX AHR, MDR1 and/or MDR3 may also be used to screen individuals for
XX susceptibility to cancer. Polymorphic sequences in ADRB1 or CHMR2 are
XX used to screen for altered cardiovascular function, in COX2 for altered
XX susceptibility to colorectal tumours, in DBI or CHMR1 for altered central
XX nervous system function, in FLAP and NMNT for altered pulmonary,
XX immunological or haematological function, in KLK2 for altered serine
XX protease activity in the prostate, in LTP for altered immunological or
XX haematological function, in CHMR3, CHMR4 or CHMR5 for altered central and
XX peripheral nervous system function. The present sequence represents a
XX polymorphic DNA sequence of the invention

XX
XX The invention relates to a chemically synthesized double stranded short
XX interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
XX cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
XX where each strand of (I) has 19-23 nucleotides, and does not require the
XX presence of nucleotides having a 2-hydroxy group for mediating RNA
XX interference. (I) is useful for treating diseases e.g., asthma, allergic
XX rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
XX vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
XX Alzheimer's disease or urinary incontinence. (I) has increased resistance
XX towards nuclease. Double stranded short interfering nucleic acid molecule
XX is produced by solid phase oligonucleotide synthesis method. This
XX sequence represents an example of a siRNA molecule of the invention.

PS Claim 33; SEQ ID NO 249; 184pp; English.
XX
CC The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA via RNA interference
CC (RNAi). The siNA molecule, compounds, compositions, and methods are
CC useful for treating or preventing respiratory and pulmonary diseases,
CC disorders, and/or conditions, including chronic obstructive pulmonary
CC disease, asthma, allergic rhinitis, sinusitis, inflammation, allergies,
CC cystic fibrosis, Alzheimer's disease, and/or urinary incontinence. The
CC present sequence represents a cholinergic receptor muscarinic 3 siRNA.

 PT disease.
 XX
 PS Claim 33; SEQ ID NO 297; 184bp; English.
 XX
 CC The invention relates to a chemically synthesized double stranded short
 CC interfering nucleic acid (siRNA) molecule that directs cleavage of a
 CC cholinergic receptor muscarinic 3 (CHRM3) RNA via RNA interference
 CC (RNAi). The siRNA molecule, compounds, compositions, and methods are
 CC useful for treating or preventing respiratory and pulmonary diseases,
 CC disorders, and/or conditions, including chronic obstructive pulmonary
 CC disease, asthma, allergic rhinitis, sinusitis, inflammation, allergies,
 CC cystic fibrosis, Alzheimer's disease, and/or urinary incontinence. The
 CC present sequence represents a cholinergic receptor muscarinic 3 siRNA.

PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.
XX
PS Disclosure; SEQ ID NO 251; 84pp; English.
XX
CC The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siNA molecule of the invention.

PT	Noel chemically synthesized double stranded short interfering nucleic acid molecule that directs cleavage of cholinergic receptor muscarinic 3 RNA through RNA interference, useful for treating asthma.	
PS	Disclosure; SEQ ID NO 217; 84bp; English.	
XX		
CC	The invention relates to a chemically synthesized double stranded short interfering nucleic acid (siNA) molecule (I) that directs cleavage of a cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference, where each strand of (I) has 19-23 nucleotides, and does not require the presence of nucleotides having a 2-hydroxy group for mediating RNA interference. (II) is useful for treating diseases e.g., asthma, allergic rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary vasoconstriction or hypertension, emphysema, irritable bowel syndrome, Alzheimer's disease or urinary incontinence. (III) has increased resistance towards nuclease. Double stranded short interfering nucleic acid molecule was produced by solid phase oligonucleotide synthesis method. This sequence represents an example of a siRNA molecule of the invention.

XX
XX Novel chemically synthesized double stranded short interfering nucleic
XX acid molecule that directs cleavage of cholinergic receptor muscarinic 3
XX RNA through RNA interference, useful for treating asthma.
XX
XX Disclosure; SEQ ID NO 231; 84pp; English.
XX
XX The invention relates to a chemically synthesized double stranded short
XX interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
XX cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
XX where each strand of (I) has 19-23 nucleotides, and does not require the
XX presence of nucleotides having a 2-hydroxy group for mediating RNA
XX interference. (I) is useful for treating diseases e.g., asthma, allergic
XX rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
XX vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
XX Alzheimer's disease or urinary incontinence. (I) has increased resistance
XX towards nuclease. Double stranded short interfering nucleic acid molecule
XX was produced by solid phase oligonucleotide synthesis method. This
XX sequence represents an example of a siRNA molecule of the invention.

CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

 XX
 XX
 XX Isolated nucleic acid molecules having polymorphisms in known human genes
 XX e.g. cytochrome P450 and catepsin S useful as genetic linkage markers
 XX for locating, identifying and characterizing the genes responsible for
 XX disorder-related traits.
 XX
 XX Example 28; Page 159; 714pp; English.
 XX
 XX This invention relates to the sequence of an isolated nucleic acid
 XX molecule comprising at least one base variation from that of a known
 XX human cytochrome P450 A1 (CYP450A1), cytochrome P450 A2 (CYP450A2),
 XX cytochrome P450 02B1 (CYP45002B1), adrenergic receptor beta1 (ADBR1),
 XX aryl hydrocarbon (AHR), aryl hydrocarbon receptor nuclear translocator
 XX (ARNT), catepsin S (CTSS), cyclooxygenase 2 (COX2), diazepam binding
 XX inhibitor (DBI), epoxide hydrolase 2 (EPHX2), 5-lipoxygenase activating
 XX protein (FLAP), glutathione-S-transferase 12 (GST12), histamine-N-methyl
 XX transferase (HNMT), (kallikrein 2) KLK2, nicotinamide -N-methyl
 XX transferase (NNMT), NADPH quinone oxidoreductase 2 (NQO2),
 XX sulfoltransferase theromolabile (STM), UDP-glucuronosyl transferase 2B4
 XX (UGT2B4), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl
 XX transferase (UGT2B15), urokinase receptor (uPA), multidrug resistance 1
 XX (MDR1), lactotransferrin (LTF), multidrug resistance associated protein 3
 XX (MRP3), orphan nuclear receptor (NR1I2), or acetylcholine muscarinic
 XX receptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence.
 XX The polymorphisms in the human genes cited in the invention are useful as
 XX genetic linkage markers for locating and characterizing the genes that
 XX are responsible for specific traits within the genome and eventually
 XX identifying the genes responsible for a variety of disorder-related
 XX traits as a result of their e.g., overexpression, constitutive
 XX expression, mutation or underexpression, which may be used in diagnosing
 XX and/or treating the disorders. The nucleic acid molecules comprising the
 XX polymorphic sequences contained in CYP450A1, CYP450A2, CYP4502B1,
 XX ARNT, EPHX2, GST12, NNMT, NQO2, NR1I2, STM, UGT2B4, UGT2B7, UGT2B15, AHR,
 XX MDR1 and/or MRP3 are useful for screening individuals for altered drug
 XX metabolism. The polymorphic sequences contained in CYP450A1, CYP450A2,
 XX AHR, MRP1 and/or MRP3 may also be used to screen individuals for
 XX susceptibility to cancer. Polymorphic sequences in ADRB1 or CHMR2 are
 XX used to screen for altered cardiovascular function. In COX2 for altered
 XX susceptibility to colorectal tumours, in DBI or CHMR1 for altered central
 XX nervous system function, in FLAP and HNMT for altered pulmonary,
 XX immunological or haematological function, in KLK2 for altered serine
 XX protease activity in the prostate, in LTF for altered immunological or
 XX haematological function, in CHMR3, CHMR4 or CHMR5 for altered central and
 XX peripheral nervous system function. The present sequence represents a
 XX polymorphic DNA sequence of the invention

XX PT New nucleic acid segments of the human genome, particularly from genes
XX PT including polymorphic sites, for phenotype correlation, forensics,
XX PT paternity testing, medicine and genetic analysis.
XX PS Claim 1; Page 68; 80pp; English.
XX CC DNA sequences AAH62100 - AAH62688 represent segments of human genes which
XX CC contain single nucleotide polymorphisms (SNPs). A method is included in
XX CC the invention for analysing a nucleic acid sample, which consists of
XX CC determining the base occupying any one of the polymorphic sites given in
XX CC the SNP containing sequences. The nucleotide sequences can be used in the
XX CC diagnosis or monitoring of diseases, such as cancer, inflammation, heart
XX CC diseases, diseases of the cardiovascular system, and infection by
XX CC microorganisms. The oligonucleotides are also useful in the manufacture
XX CC of a medicament for the treatment or prophylaxis of the diseases, and as
XX CC a pharmaceutical. SNP containing oligonucleotides are useful in
XX CC applications such as phenotype correlation, forensics, paternity testing,
XX CC medicine and genetic analysis

PT Novel polymorphic variant of reference sequence for human cholinergic
PT receptor, muscarinic 3 gene, useful for diagnostic and therapeutic
PT purposes.
XX
PS Example 1; Page 29; 54bp; English.
XX
CC The patent relates to polymorphic variants of human cholinergic receptor,
CC muscarinic 3 (CHRM3) gene. The polymorphic variant comprises at least one
CC single nucleotide polymorphism selected from cytosine at PS1, adenine at
CC PS2 or PS3, and cytosine at PS4. The invention also relates to a method
CC for genotyping and haplotyping the CHRM3 gene for identification of
CC variants. The polymorphic variant is useful for therapeutic purposes, for
CC studying the expression and biological function of CHRM3, as well as for
CC developing drugs targeting the CHRM3 protein. The variant is also useful
CC in diagnostics and forensic applications. The recombinant nonhuman
CC organism transfected with the polymorphic variant is useful for studying
CC expression of CHRM3 isogenes in vivo, for in vivo screening and testing
CC of drugs targeted against CHRM3 protein, and for testing the efficacy of
CC therapeutic agents and compounds for Alzheimer's disease, Sjogren's
CC syndrome, disorders associated with smooth muscle contractility and
CC sudden infant death syndrome. The CHRM3 protein variant is useful in drug
CC screening assays and its antibodies are useful in immunoassays to detect
CC CHRM3 protein variants in biological samples. The present sequence is a
CC PCR primer used for amplifying a fragment of human CHRM3 gene for
XX detecting polymorphic sites

XX New short interfering nucleic acid molecule that directs cleavage of a

XX cholinegenic receptor muscarinic 3 RNA, useful for treating or preventing

XX respiratory and pulmonary diseases, e.g. chronic obstructive pulmonary

XX disease.

XX Claim 33; SEQ ID NO 202; 184pp; English.

CC The invention relates to a chemically synthesized double stranded short

XX interfering nucleic acid (siNA) molecule that directs cleavage of a

XX cholinegenic receptor muscarinic 3 (CHRM3) RNA via RNA interference

XX (RNAi). The siNA molecule, compounds, compositions, and methods are

XX useful for treating or preventing respiratory and pulmonary diseases,

XX disorders, and/or conditions, including chronic obstructive pulmonary

XX disease, asthma, allergic rhinitis, sinusitis, inflammation, allergies,

XX cystic fibrosis, Alzheimer's disease, and/or urinary incontinence. The

XX present sequence represents a cholinegenic receptor muscarinic 3 siRNA.

XX Novel polymorphic variant of reference sequence for human cholinergic
PT receptor, muscarinic 3 gene, useful for diagnostic and therapeutic
PS purposes.
XX Example 1; Page 29; 54pp; English.
XX The patent relates to polymorphic variants of human cholinergic receptor,
CC muscarinic 3 (CHRM3) gene. The polymorphic variant comprises at least one
CC single nucleotide polymorphism selected from cytosine at PS1, adenine at
CC PS2 or PS3, and cytosine at PS4. The invention also relates to a method
CC for genotyping and haplotyping the CHRM3 gene for identification of
CC variants. The polymorphic variant is useful for therapeutic purposes, for
CC studying the expression and biological function of CHRM3, as well as for
CC developing drugs targeting the CHRM3 protein. The variant is also useful
CC in diagnostics and forensic applications. The recombinant nonhuman
CC organism transfected with the polymorphic variant is useful for studying
CC expression of CHRM3 isogenes in vivo, for in vivo screening and testing
CC of drugs targeted against CHRM3 protein, and for testing the efficacy of
CC therapeutic agents and compounds for Alzheimer's disease, Sjogren's
CC syndrome, disorders associated with smooth muscle contractility and
CC sudden infant death syndrome. The CHRM3 protein variant is useful in drug
CC screening assays and its antibodies are useful in immunoassays to detect
CC CHRM3 protein variants in biological samples. The present sequence is a
CC PCR primer used for amplifying a fragment of human CHRM3 gene for
SQ detecting polymorphic sites

 PT New G protein-coupled receptors with a mutation in an intracellular
 PT domain; useful for high throughput screening assays for e.g. drugs,
 PT insecticides or nematocides.
 XX
 PS Example 2; Page 12; 37pp; English.
 XX
 CC This is the DNA sequence of a primer that was used in the PCR
 CC amplification of a DNA fragment consisting of the C-terminal coding
 CC portion of Drosophila melanogaster muscarinic acetylcholine receptor
 CC (MAR) from a Pml site in the 6th transmembrane domain. MAR is a G
 CC protein coupled receptor (GPCR). The PCR product was ligated into
 CC expression plasmid p426GPD. Yeast cells containing an intracellular loop
 CC 3 (IC3) deleted Drosophila MAR produced an agonist-dependent growth
 CC response. The invention provides modified GPCRs having a mutation in IC3
 CC that results in an improved functional response in cell-based assays. The
 CC modification promotes growth stimulation by a GPCR agonist, especially by
 CC improving coupling between the receptor and a heterotrimeric G protein.
 CC Polynucleotides encoding the mutated GPCR, chimeric GPCR, vectors and
 CC host cells are also claimed. The modified GPCRs can be used in improved
 CC high throughput screening assays (especially in yeast cells) for
 CC therapeutic drugs, insecticides, nematocides etc. Agonists of G protein-
 CC coupled insect MARs possess substantial insecticide and miticide activity

XX New G protein-coupled receptors with a mutation in an intracellular
PT domain, useful for high throughput screening assays for e.g. drugs,
PT insecticides or nematocides.
XX
PS Example 1; Page 8; 37pp; English.
XX
CC This primer sequence, which includes a 3' PmlI site, was used in the PCR
CC amplification of DNA encoding intracellular loops (IC3) of rat M3
CC muscarinic acetylcholine receptor (MAR). MAR is a G protein coupled
CC receptor (GPCR). Comparison of the expression of wild-type MAR and IC3
CC deleted MAR showed that deletion of a portion of the IC3 produced a
CC functional GPCR in yeast. Modification of internal domains was therefore
CC suggested to be a generalizable method for improving the function of
CC heterologous GPCRs expressed in yeast. The invention provides modified
CC GPCRs having a mutation in IC3 that results in an improved functional
CC response in cell-based assays. The modification promotes growth
CC stimulation by a GPCR agonist, especially by improving coupling between
CC the receptor and a heterotrimeric G protein. Polynucleotides encoding the
CC mutated GPCR, chimeric GPCR, vectors and host cells are also claimed. The
CC modified GPCRs can be used in improved high throughput screening assays
CC (especially in yeast cells) for therapeutic drugs, insecticides,
CC nematocides etc

PT	Identifying agonists of G protein-coupled receptors (GPCRs) for use in					
PT	disease treatment, comprises contacting candidate compounds with versions					
PT	of GPCRs.					
XX						
XX	Example 2; Page 52; 394pp; English.					
XX						
CC	The invention relates to G protein-coupled receptors (GPCRs) for which					
CC	the endogenous ligand has been identified. Non-endogenous constitutively					
CC	activated versions of known GPCRs are used in the invention for the					
CC	direct identification of candidate compounds as receptor agonists,					
CC	inverse agonists or partial agonists. Such agonists are useful as					
CC	therapeutic agents for diseases or disorders associated with GPCRs. The					
CC	present sequence is a primer used to prepare a non-endogenous version of					
CC	a known GPCR in an example illustrating the invention

Listing first 910 summaries

Database : rng.subdb:*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

ALIGNMENTS

RESULT 1
LOCUS AR591148 37 bp DNA
DEFINITION Sequence 279 from patent US 6806054.
ACCESSION AR591148
VERSION AR591148.1 GI:56638957

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

The invention relates to a method of detecting or detecting and
 distinguishing between or among breast cell proliferative disorders in a
 subject comprising determining the expression of at least one gene or
 sequence given in the specification, and determining from the expression
 the presence, absence or subclass of a breast cell proliferative
 disorder. The invention also relates to a treated nucleic acid used to
 convert at least one unmethylated cytosine base of the genomic DNA
 sequence to uracil or another base that is detectably dissimilar to
 cytosine in terms of hybridization, and an oligomer that is complementary
 to, or hybridizes under moderately stringent conditions to a treated
 genomic DNA sequence or a set of oligomers comprising at least two
 oligonucleotides. The method is useful for detecting or detecting and
 distinguishing between or among breast cell proliferative disorders in a
 subject. This sequence represents a PCR primer used to amplify human
 genomic DNA used in the scope of the invention. Note: The sequence data
 for this patent did not form part of the printed specification, but was
 obtained in electronic format directly from WIPO at
 ftp.wipo.int/pub/published_pct_sequences.

Novel chemically synthesized double stranded short interfering nucleic
 acid molecule that directs cleavage of cholinergic receptor muscarinic 3
 RNA through RNA interference, useful for treating asthma.

Disclosure; SEQ ID NO 175; 84bp; English.

The invention relates to a chemically synthesized double stranded short
 interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
 cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
 where each strand of (I) has 19-23 nucleotides, and does not require the
 presence of nucleotides having a 2-hydroxy group for mediating RNA
 interference. (I) is useful for treating diseases e.g., asthma, allergic
 CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
 CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
 CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
 CC towards nuclease. Double stranded short interfering nucleic acid molecule
 CC was produced by solid phase oligonucleotide synthesis method. This
 CC sequence represents an example of a siRNA molecule of the invention.

 PT Detecting and/or differentiating prostate cell proliferative disorders in
 PT a subject by contacting genomic with reagent(s) that distinguishes
 PT between methylated and non-methylated CpG dinucleotides in target nucleic
 PT acids.
 XX
 PS Example 3; SEQ ID NO 693; 164pp; English.
 XX
 CC The invention describes a method of detecting and/or differentiating
 CC between prostate cell proliferative disorders in a subject comprising
 CC contacting genomic DNA isolated from a biological sample with at least
 CC one reagent, or series of reagents that distinguishes between methylated
 CC and non-methylated CpG dinucleotides within one or a combination of
 CC target nucleic acids e.g. HISTONE H4. Also described are: a treated
 CC nucleic acid derived from SEQ ID NO: 1-59, 1017-1028, 1116, 1171, where
 CC the treatment converts at least one unmethylated cytosine base of the
 CC genomic DNA sequence to uracil or another base that is detectable
 CC dissimilar to cytosine in terms of hybridization; a nucleic acid
 CC comprising at least 16 contiguous nucleotides of a treated genomic DNA
 CC sequence selected from SEQ ID NO: 60-295, 1029-1076, 1117-1120, 1172-1175
 CC and sequences complementary to them; an oligomer comprising a sequence of
 CC at least 9 contiguous nucleotides that is complementary to, or hybridizes
 CC under moderately stringent or stringent conditions to a treated genomic
 CC DNA sequence above; a set of oligomers comprising at least two
 CC oligonucleotides as above; and a kit useful for detecting and/or
 CC distinguishing between and/or among prostate cell proliferative disorder of a
 CC subject comprising at least one of a bisulfite reagent, or a methylation-
 CC sensitive restriction enzyme, and at least one nucleic acid molecule or
 CC peptide nucleic acid molecule comprising a contiguous sequence at least 9
 CC nucleotides that is complementary to, or hybridizes under moderately
 CC stringent or stringent conditions to a sequence selected from SEQ ID NO:
 CC 60-295, 1029-1076, 1117-1120, 1172-1175 and their complements. The
 CC method, nucleic acid, oligomer, set of oligonucleotide, and kit are
 CC useful for detecting and/or differentiating between or among cell
 CC proliferative disorders. This sequence represents a primer used in the
 CC isolation of gene encoding a prostate cell proliferation associated
 CC protein.

 PT Classifying breast cancers according to estrogen receptor status by
 PT obtaining a genomic DNA sample from a subject and determining the
 PT methylation status of CpG positions within a target nucleic acid.
 XX
 PS Example 1; SEQ ID NO 630; 412pp; English.
 XX
 CC The invention relates to classifying breast cancers according to estrogen
 CC receptor status comprising obtaining a genomic DNA sample from a subject,
 CC determining the methylation status of one or more CpG positions comprised
 CC within at least one target nucleic acid (comprising the gene IGFBP7
 CC and/or its regulatory regions) and determining the estrogen receptor
 CC status of the subject. The method also comprises obtaining a genomic DNA
 CC sample from a subject, determining the methylation status of one or more
 CC CpG positions comprised within at least one target nucleic acid
 CC consisting of IGFBP7, S100A2, ARH1, CSRG2, DAPK1, SFN, PTGS2, IGF1, SEQ
 CC ID NO: 12, ARL7, PLAU, MRF, S100A7, PABP3, SEQ ID NO: 19, SCG3A1,
 CC SRP1NB5, GSTP1, SEQ ID NO: 24, LIM DOMAIN KINASE 1, I16, SEQ ID NO: 27,
 CC EYA4, SEQ ID NO: 29, SIRT2, CCND2, HOXA5, APAF1, MGC10561,
 CC PRDM2, PROSTRAGLANDIN E2 RECEPTOR, SNOG, NR2E1, SFN, PRESS8 (appearing as
 CC AEF08705-AEF08745) and/or their regulatory regions by contacting the
 CC target nucleic acid with one or more agents (e.g. bisulfite) that convert
 CC cytosine bases that are unmethylated at the 5'-position to a base that is
 CC detectably dissimilar to cytosine in terms of hybridization properties,
 CC and determining the estrogen receptor status of the subject. The method
 CC is useful for classifying breast cancers according to estrogen receptor
 CC status, nodal status or progesterone receptor status. The present
 CC sequence is a probe that detects a region of a target DNA that containing
 CC an unmethylated CpG dinucleotide (i.e. the sequence has been converted to
 CC Tpg).

XX
XX New oligomeric compound for the modulation of survivin, useful for
XX treating e.g. cancers, atherosclerosis, psoriasis, diabetic retinopathy,
XX rheumatoid arthritis, asthma, warts, or allergic dermatitis.
XX
XX Example 10; SEQ ID NO 272; 264pp; English.
XX
XX The invention relates to antisense oligonucleotides consisting of 8-50
XX nucleotides and/or nucleotide analogs which inhibit expression of human
XX survivin, an inhibitor of apoptosis which is also essential for cell
XX division and angiogenesis. The antisense oligonucleotides comprise a
XX subsequence of 8 or more nucleotides or nucleotide analogs, wherein the
XX subsequence is located within a sequence selected from ADM09444-ADM09586.
XX The oligonucleotides preferably contain one or more (preferably 6-10)
XX nucleotide analogs, especially a locked nucleic acid (LNA), and also
XX a phosphorothioate group or a boranophosphate group. The invention also
XX relates to a conjugate comprising a survivin antisense oligonucleotide of
XX the invention and one or more non-nucleotide or non-polynucleotide
XX moieties covalently attached to the oligonucleotide, and a pharmaceutical
XX composition comprising a survivin antisense oligonucleotide or conjugate
XX of the invention, optionally further comprising a chemotherapeutic agent.
XX The survivin antisense oligonucleotides, and conjugates and compositions
XX containing them, are useful in the treatment of cancers such as
XX carcinomas (e.g., malignant melanoma, basal cell carcinoma, ovarian
XX carcinoma, breast carcinoma, non-small cell lung cancer, renal cell
XX carcinoma, bladder carcinoma, recurrent superficial bladder cancer,
XX stomach carcinoma, prostatic carcinoma, pancreatic carcinoma, lung
XX carcinoma, cervical carcinoma, cervical dysplasia, laryngeal
XX papillomatosis, colon carcinoma, colorectal carcinoma and carcinoma
XX tumors); sarcomas (e.g., osteosarcoma, Ewing's sarcoma, chondrosarcoma,
XX malignant fibrous histiocytoma, fibrosarcoma, and Kaposi's sarcoma); or
XX gliomas. The survivin antisense oligonucleotides are also useful in the
XX treatment of conditions such as atherosclerosis, psoriasis, diabetic
XX retinopathy, rheumatoid arthritis, asthma, warts, and allergic
XX dermatitis. They may additionally be used for inhibiting cellular
XX proliferation, for modulating apoptosis and for treating a disease
XX related to abnormal angiogenesis. The survivin antisense oligonucleotides
XX of the invention are shorter than prior art survivin antisense
XX oligonucleotides (16-mers compared to 20-25-mers), therefore having
XX increased specificity and affinity for survivin mRNA, and also have

CC higher biostability and cell permeability. The present sequence
CC represents an antisense oligonucleotide targeted to the human survivin
CC cDNA target sequence shown in ADM09443 used in an example of the
CC invention.

 DR
 XX New oligomeric compound for the modulation of survivin, useful for
 PT treating e.g. cancers, atherosclerosis, psoriasis, diabetic retinopathy,
 PT rheumatoid arthritis, asthma, warts, or allergic dermatitis.
 PT
 XX Claim 1; SEQ ID NO 33; 264pp; English.
 PS
 XX The invention relates to antisense oligonucleotides consisting of 8-50
 CC nucleotides and/or nucleotide analogs which inhibit expression of human
 CC survivin, an inhibitor of apoptosis which is also essential for cell
 CC division and angiogenesis. The antisense oligonucleotides comprise a
 CC subsequence of 8 or more nucleotides or nucleotide analogs, wherein the
 CC subsequence is located within a sequence selected from ADM09444-ADM09586.
 CC The oligonucleotides preferably contain one or more (preferably 6-10)
 CC nucleotide analogs, especially a locked nucleic acid (LNA), and also
 CC preferably contain a linkage group selected from a phosphate group, a
 CC phosphorothioate group or a boranophosphate group. The invention also
 CC relates to a conjugate comprising a survivin antisense oligonucleotide
 CC and the invention and one or more non-nucleotide or non-polynucleotide
 CC moieties covalently attached to the oligonucleotide; and a pharmaceutical
 CC composition comprising a survivin antisense oligonucleotide or conjugate
 CC of the invention, optionally further comprising a chemotherapeutic agent.
 CC The survivin antisense oligonucleotides and conjugates and compositions
 CC containing them, are useful in the treatment of cancers such as
 CC carcinomas (e.g., malignant melanoma, basal cell carcinoma, ovarian
 CC carcinoma, breast carcinoma, non-small cell lung cancer, renal cell
 CC carcinoma, bladder carcinoma, recurrent superficial bladder cancer,
 CC stomach carcinoma, prostatic carcinoma, pancreatic carcinoma, lung
 CC carcinoma, cervical carcinoma, cervical dysplasia, laryngeal
 CC papillomatosis, colon carcinoma, colorectal carcinoma and carcinoma
 CC tumors); sarcomas (e.g., osteosarcoma, Ewing's sarcoma, chondrosarcoma,
 CC malignant fibrous histiocytoma, fibrosarcoma, and Kaposi's sarcoma); or
 CC gliomas. The survivin antisense oligonucleotides are also useful in the
 CC treatment of conditions such as atherosclerosis, psoriasis, diabetic
 CC retinopathy, rheumatoid arthritis, asthma, warts, and allergic
 CC dermatitis. They may additionally be used for inhibiting cellular
 CC proliferation, for modulating apoptosis and for treating a disease
 CC related to abnormal angiogenesis. The survivin antisense oligonucleotides
 CC of the invention are shorter than prior art survivin antisense
 CC oligonucleotides (16-mers compared to 20-25-mers), therefore having

CC putative regulatory region.

Modulating pathways leading to programmed cell death, by selecting a
 target within Jun-N-terminal kinase pathway and interfering with the
 target using agent that up or down regulates the JNK pathway.

Disclosure; Page 131; 131pp; English.

The invention relates to a novel method for modulating pathways leading
 to programmed cell death, comprising selecting a target within the c-Jun-
 N-terminal kinase (JNK) pathway, and interfering with the target using
 an agent that either up regulates or down regulates the JNK pathway. The
 method of the invention has cytostatic activity. A method of the
 CC invention is useful for modulating pathways leading to programmed cell
 CC death induced by TNFalpha, Fas, TRAIL, genotoxic agent such as
 CC demorubicin or cisplatinum. Another method of the invention is useful
 CC for screening and identifying an agent, preferably peptides, peptide
 CC mimetics, peptide-like molecules, mutant proteins, CDNs, antisense
 CC oligonucleotides or constructs, lipids, carbohydrates or synthetic or
 CC natural chemical compounds, that modulate JNK pathway in vitro. A method
 CC of the invention may also be useful for treating cancer, and for
 CC preventing apoptosis. Compounds that are capable of interfering with the
 CC ability of Gadd45beta to associate with JNK2 are useful for treating
 CC human diseases such as chronic inflammatory, and autoimmune conditions
 CC and certain types of cancer. The present sequence is used in the
 CC exemplification of the invention

New nucleic acid sequences of the optineurin gene are useful to detect
 polymorphisms particularly single nucleotide polymorphisms in the
 PT optineurin promoter to diagnose, prognosis and treat glaucoma and related
 PT disorders.

Claim 11; SEQ ID NO 103; 159pp; English.

The invention relates to an isolated nucleic acid (N1) comprising at
 least 20 but not more than 1500 consecutive nucleotides of the optineurin
 CC promoter appearing as ADE13990. Also included are the optineurin promoter
 CC operably linked to a heterologous nucleic acid, a nucleic acid capable of
 CC detecting a single nucleotide polymorphism (SNP) in the optineurin
 CC promoter, a host cell comprising the promoter operably linked to a
 CC heterologous sequence, diagnosing or prognosing glaucoma in a sample
 CC obtained from a cell or bodily fluid (comprising detecting a polymorphism
 CC in a promoter region of the optineurin gene, associated with a glaucoma
 CC phenotype), detecting a SNP sequence variation in a sample containing
 CC DNA, detecting the presence of an optineurin promoter sequence variation
 CC in a sample containing DNA, determining the presence or increased
 CC susceptibility to glaucoma or to a progressive ocular hypertensive
 CC disorder resulting in loss of visual field in a patient (or the severity
 CC or progression of glaucoma in a patient, comprising providing
 CC amplification reaction primers that direct amplification of a selected
 CC nucleic acid region containing the variation within the optineurin
 CC promoter and amplifying the DNA) and detecting a polymorphism (comprising
 CC obtaining a sample containing human genomic DNA, providing a nucleic acid
 CC capable of detecting a SNP located within an optineurin promoter, and
 CC detecting the polymorphism). The invention is used to diagnose and
 CC prognose glaucoma and also to treat glaucoma related disorders. The
 CC present sequence is an optineurin promoter motif, repeat element or

PT Detecting a target nucleic acid, for identifying microorganisms,
XX
PT diagnosing infections or detecting genetic abnormalities, comprises
XX
PT producing and detecting double-stranded hybrids between probes and the
XX
PT target nucleic acid.
XX
PS Claim 53; Page 24; 128pp; English.
XX
CC The invention relates to detecting a target nucleic acid comprising (a)
XX
CC hybridising a single-stranded or partially single-stranded target nucleic
XX
CC acid to a capture sequence probe and a signal sequence probe to form
XX
CC double-stranded hybrids between the probes and the target nucleic acid,
XX
CC where the capture sequence probe and the signal sequence probe are
XX
CC capable of hybridising to non-overlapping regions within the target
XX
CC nucleic acid and not hybridising to each other, (b) adding a blocker
XX
CC probe to the hybridisation reaction, where the blocker probe hybridises
XX
CC to excess non-hybridised capture sequence probes, (c) binding the hybrid
XX
CC to a solid phase to form a bound hybrid, and (d) detecting the bound
XX
CC hybrid. The method is used to detecting a target nucleic acid. The method
XX
CC is useful for identifying and classifying microorganisms, diagnosing
XX
CC infectious diseases, detecting and characterising genetic abnormalities,
XX
CC identifying genetic changes associated with cancer, studying genetic
XX
CC susceptibility to disease, and measuring response to various types of
XX
CC treatment. The method is also useful for detecting the presence of
XX
CC nucleic acid in test samples. The method is not only rapid and sensitive,
XX
CC but is also highly specific and capable of discriminating highly
XX
CC homologous nucleic acid target sequences. Blocker probes comprising
XX
CC oligonucleotides complementary to the capture sequence probes are used in
XX
CC the method to eliminate excess capture sequence probe, thus reducing the
XX
CC background signal in detection and increasing specificity of the assay.
XX
CC The present sequence is a blocker probe derived from HSV-1, HSV-2, HPV or
XX
CC HBV sequences

XX New multiple tumor suppressor 2-specific antibodies useful for detecting
PT differences in the absence of the peptides or mutant gene products, or
XX for screening tissues.
XX
XX Example 13; Col 52; 71pp; English.
PS
XX
XX The present invention relates to an antibody or its fragment that
CC specifically binds to a human multiple tumour suppressor (MTS). The
CC invention is useful for detecting differences in the absence of MTS
CC peptides, to screen a tissue or to detect mutant MTS gene products. The
CC antibodies will immunoprecipitate MTS proteins from solution as well as
CC react with MTS protein on Western or immunoblots of polyacrylamide gels

 PT Simple, rapid and accurate method for distinguishing HLA class I allele
 CC type with possibility of mechanization and automation, applicable in
 CC judging donor-recipient compatibility during organ transplant and disease
 PT diagnosis.
 XX
 PS Claim 8; Page 53; 83pp; Japanese.
 XX
 CC The present invention describes a method for distinguishing a human
 CC leukocyte antigen (HLA) class I antigen or allele by a combination of
 CC polymerase chain reaction (PCR) using a primer pair whereby all HLA-A, -B
 CC or -C alleles can be amplified or using reverse hybridisation analysis
 CC comprising a DNA probe covalently bonded to microtitre plate wells which
 CC are hybridisable specifically with the base sequence of at least one
 CC specific HLA-A, -B or -C allele. The method is applicable in gene typing,
 CC judging donor-recipient compatibility during organ transplant and
 CC correlation analysis for diagnosis of various diseases. The method is
 CC simple, rapid and accurate, with possibility of mechanisation and
 CC automation, without the problems encountered by using the prior-art
 CC techniques. AAA65943 to AAA67072 represent oligonucleotide probes and PCR
 CC primers for use in the method of the present invention

XX PT New mutants of the human multiple tumor suppressor gene, useful as
XX diagnostic markers of cancer, contain specific base alterations or
XX deletions.
XX
XX PS Example 13; Col 51; 72pp; English.
XX
XX CC The invention relates to variants (AA11196-AA11206) of the human multiple
XX CC tumour suppressor 1 (MTS1) gene (AA11165). The variants have the
XX CC following changes relative to this sequence: A at any of positions 265,
XX CC 442, 330 and 329; T at any of positions 172, 238, 341 and 148 and
XX CC deletions of nucleotides 290-294, 172-179 or 128-129. The variants are
XX CC somatic mutations of MTS1, indicative of predisposition to melanoma and
XX CC many other cancers, so detecting them is useful for diagnosis, prognosis
XX CC and monitoring of cancer (including prenatal analysis). Cells and animals
XX CC that express the variants are useful as model systems for identifying
XX CC potential anticancer agents. This sequence represents a primer used to
XX CC screen for the human MTS2 sequence (AA11182)

XX Diagnosing a polymorphism associated with a predisposition for cancer.
XX
XX Example 13; Col 51; 74pp; English.
XX
XX This sequence is a PCR primer for DNA encoding the human MTS2 protein.
XX The invention relates to a method for diagnosing a polymorphism
XX associated with a predisposition to cancer by detecting a germ-line
XX alteration of a wild-type Multiple Tumour Suppressor (MTS) gene or its
XX expression products in a human sample. The method comprises detecting a
XX germ-line alteration of a wild-type MTS gene or its expression products
XX in a human sample, the alteration indicating a predisposition to at least
XX one of the cancers. The cancer is selected from melanoma, leukaemia,
XX astrocytoma, glioblastoma, lymphoma, glioma, Hodgkin's lymphoma, chronic
XX lymphocytic leukaemia (CLL), and cancers of the pancreas, breast,
XX thyroid, ovary, uterus, testis, kidney, stomach and rectum. The method
XX may be used as the basis for developing very important diagnostic tests
XX capable of predicting the predisposition to cancer. The MTS gene is
XX involved in the progression of multiple tumour types and may provide
XX means for a general anti-cancer therapy by virtue of its ability to
XX suppress tumour growth

 PT treat HIV infections.
 PT
 XX Claim 3; Page 34; 76pp; English.
 PS
 XX The present invention describes the detection of drug-selected mutations
 CC in the HIV protease gene. The method of detection allows the simultaneous
 CC characterisation of a range of codons involved in drug resistance using
 CC sets of probes optimised to function together in a reverse-hybridisation
 CC assay. AAZ97517 to AAZ97997 represent specifically claimed probes for use
 CC in the assay, and AAZ97479 to AAZ97501 represent specifically claimed HIV
 CC protease gene polymorphic nucleotide sequences. AAZ97502 to AAZ97515, and
 CC AAZ98004 to AAZ98007, represent PCR primers for the HIV protease gene,
 CC and AAZ97516 represents an HIV protease probe used in an example from the
 CC present invention. The method, probes and primers can be used for the
 CC detection of drug-selected mutations in the HIV protease gene. The method
 CC allows the simultaneous characterisation of a range of codons involved in
 CC drug resistance. The method may also be used for HIV protease genotyping
 CC assays. The probes are able to discriminate between wild type and mutated
 CC protease sequences. The method allows rapid and reliable detection of
 CC drug-selected mutation in HIV. (Updated on 15-SEP-2003 to standardise OS
 CC field)

CC suppressor (MTS) gene, to diagnose and treat cancer. The MTS gene is
CC useful in the diagnosis and prognosis of human cancer, e.g. by standard
CC nucleic hybridisation techniques, of patient samples. The mutated
CC sequences are those that are present in somatic mutations of the gene in
CC cancers. The vectors can be used for gene therapy strategies to replace
CC function of mutated protein in patients. These can also be used to
CC construct protein mimetics, also for therapeutic strategies. In addition
CC the expression constructs can also be used for recombinant production of
CC MTS. Recombinant MTS can be used to screen for drugs to be used for
CC cancer therapy, and the protein itself may also be used to restore MTS
CC function in a cell

XX New hairpin ribozyme - for inhibiting replication and infectivity of
 PT hepatitis B virus.

PS Example 1; Page 17; 34pp; English.

XX A new hairpin ribozyme has been developed which is able to inhibit
 CC replication and infectivity of hepatitis B virus (HBV). The present
 CC sequence represents a hairpin ribozyme recognition site in human HBV. The
 CC hairpin ribozyme, and the nucleic acid encoding it, can be introduced
 CC into a cell infected with HBV, or susceptible to infection, to inhibit
 CC the replication/infectivity of HBV. Alternatively, cells transduced with
 CC a vector ex vivo are administered to a patient. Hairpin ribozymes act on
 CC pregenomic RNA and so are potentially capable of eliminating
 CC (extra)hepatic replication and transport of HBV in all infected patients,
 CC including chronic carriers. Also infection by hepatitis D (which requires
 CC HBV surface antigen as its envelope) is prevented

XX
XX Endo-ribonuclease nucleic acids - which encode ribozymes which cleave co-
XX receptor RNA expressed in cells, used particularly for inhibiting HIV
XX infection of cells.
XX
XX Claim 3; Page 29; 83pp; English.
XX
XX This represents a target sequence of HIV-1 co-receptor fusin. The
XX invention provides endo-ribonuclease nucleic acid that encodes a ribozyme
XX which cleaves a co-receptor RNA expressed in a cell. The co-receptor RNA
XX is a member of the seven trans-membrane protein receptor family. This can
XX be used in a method of inhibiting HIV infection of a cell which comprises
XX cleaving a co-receptor mRNA expressed in the cell. The co-receptor mRNA
XX encodes an HIV co-receptor protein selected from fusin, beta-chemokine
XX receptor-5 (CCR-5), CCR-3 and CCR-2b. The cleavage of the co-receptor
XX mRNA inhibits the production of the selected co-receptor protein, thereby
XX inhibiting HIV infection of the cell. The endo-ribonucleases can be used
XX to specifically cleave RNAs. The method can be used for inhibiting HIV
XX infection of cells by inhibiting expression of HIV co-receptor on the
XX surface of cells. Because the level of co-receptor on the surface of the
XX cell is reduced, HIV entry into the cells is inhibited. Cleavage of HIV
XX co-receptor mRNA using targeted ribozymes is not cytotoxic to cells
XX expressing the co-receptor and the cells retain normal immune function.

XX
XX Detecting target nucleic acid in mammalian sputum - particularly for
XX diagnosis of lung neoplasia involving mutation(s) in the K-ras oncogene
XX or p53 tumour suppressor.
XX

```

```

PS Example 1; Page 29; 122pp; English.
XX
XX The sequences given in AAQ92112-211 are probes which were used in the
XX detection of a mutant p53 gene sequence. The DNA to be detected is
XX amplified using PCR and then these probes which are pref. labeled using
XX 32-P gamma-ATP are used to detect the mutant sequences. The primers and
XX probes given in AAQ92098-219 are used in the method of the invention for
XX detecting mammalian target DNA in sputum samples. Analysis of the target
XX DNA is used to diagnose benign or malignant neoplasms of the lung. It is
XX also useful for screening people at high risk or for monitoring progress
XX of treatment of lung neoplasms. The method is based on the discovery that
XX mutant target DNA associated with lung cancer is present at detectable
XX levels in sputum. Cells shed into sputum from head and neck cancers may
XX also be detected

PT New gonadotropin-releasing hormone 2 (GNRH2) polypeptide encoded by
PT genetic variants having polymorphisms in the GNRH2 gene, for studying the
PT function of, and treating disorders, such as, reproductive disorders.
XX
PS Claim 14; Col 13; 33pp; English.
XX
CC The invention relates to gonadotropin-releasing hormone 2 (GNRH2) and its
CC nucleic acid sequence. Polymorphic variants of the GNRH2 gene are useful
CC in studying the expression and function of GNRH2, and in expressing GNRH2
CC proteins for use in screening candidate drugs for treating diseases
CC associated with GNRH2 activity, such as reproductive disorders.
CC Polynucleotides comprising a polymorphic gene variant or fragment may be
CC used for therapeutic purposes, where a patient could benefit from
CC expression or increased expression of a particular GNRH2 protein isoform,
CC or an expression vector encoding the isoform may be administered to the
CC patient. Haplotype information is useful in improving the efficiency and
CC output of several steps in a drug discovery and development process,
CC including target validation, identifying lead compounds, and early phase
CC clinical trials. GNRH2 gene is used in gene therapy. The present sequence
CC is an allele-specific oligonucleotide (ASO) primer used for detecting
CC human GNRH2 gene polymorphisms

PT Novel cholinergic receptor, muscarinic 5 polynucleotide useful
PT therapeutically and in screening for candidate drug to treat diseases
PT related to the receptor activity.
XX
PS Claim 14; Page 13; 72pp; English.
XX
CC The present invention relates to a new cholinergic receptor, muscarinic 5
CC (CHRM5) polynucleotide comprising a sequence which is a polymorphic
CC variant for a reference sequence for the CHRM5 gene or its fragment, or a
CC polymorphic variant of a reference sequence for a CHRM5 cDNA or its
CC fragment. The invention is useful in drug screening assays. The molecules
CC of the invention are useful in studying the expression and function of
CC CHRM5, and in expressing CHRM5 protein for use in screening for candidate
CC drugs to treat diseases related to CHRM5 activity. The methods of the
CC invention are useful in developing diagnostic tests and therapeutic
CC treatments. The method is also useful in the design of clinical trials of
CC candidate drugs for treating specific condition or disease associated
CC with CHRM5 activity and is useful in determining whether an individual
CC has one of the haplotypes or one of the haplotype pairs. The invention is
CC useful in a variety of diagnostic and prognostic formats and therapeutic
CC methods. The invention is also useful in genotyping and/or haplotyping
CC the CHRM5 gene in an individual. The present nucleic acid sequence
CC represents one of a collection of allele-specific oligonucleotide (ASO)
CC primers (ABK81775-ABK81794) that were used in the invention to detect
CC polymorphisms in the human CHRM5 gene

PT Determining the genetic affinity of organisms or viruses useful in
PT bioterrorism, comprises determining which nodes in the bifurcating tree
PT of genetic relationship that designs the signature probes produces the
PT hybridization signal.
XX
XX Claim 15; Page 36; 62pp; English.
XX
PS The present invention relates to a new method for determining the genetic
CC affinity of organisms or viruses in the test sample. The method involves
CC identifying the closest known genetic relatives of the organisms or virus
CC by determining which nodes in the bifurcating tree of genetic
CC relationship was used to design the signature probes. The method is
CC useful in identifying the phylogenetic affinity of an unknown organism
CC useful for unanticipated problems involving microorganisms that concerns
CC space flight, medicine, indoor air quality, bioweapons of mass
CC destruction, or epidemics. The signature sequences are useful in the
CC hybridization to determine the phylogenetic tree positions of the
CC organisms in the sample. The method can also be useful as an assay for
CC bioterrorism. Air filtrate from a government building was collected and
CC nucleic acids isolated. RNA was enriched using DNase and RNA fragmented
CC by heating. Probes specific to several known bioterrorism agents give
CC negative results. Molecular beacon based scoring of signature sequences
CC reveals the presence of unexpectedly high concentrations of bacteria with
CC genetic affinity to genus Bacillus. The method provides a more rapid
CC approach for determining the affinity of organisms in the test sample.

CC The methodology is more general than the specifically targeted tests of
CC the Kohne approach, and faster and more convenient than detailed
CC sequencing of the rRNAs or their encoding DNA. The present nucleic acid
CC sequence represents an RNA sequence that was used in the methods of the
CC invention for sample identification

PT Novel cholinergic receptor, muscarinic 5 polynucleotide useful
PT therapeutically and in screening for candidate drug to treat diseases
PT related to the receptor activity.
XX
XX Claim 14; Page 13; 72pp; English.
XX
PS The present invention relates to a new cholinergic receptor, muscarinic 5
CC (CHRM5) polynucleotide comprising a sequence which is a polymorphic
CC variant for a reference sequence for the CHRM5 gene or its fragment, or a
CC polymorphic variant of a reference sequence for a CHRM5 cDNA or its
CC fragment. The invention is useful in drug screening assays. The molecules
CC of the invention are useful in studying the expression and function of
CC CHRM5, and in expressing CHRM5 protein for use in screening for candidate
CC drugs to treat diseases related to CHRM5 activity. The methods of the
CC invention are useful in developing diagnostic tests and therapeutic
CC treatments. The method is also useful in the design of clinical trials of
CC candidate drugs for treating specific condition or disease associated
CC with CHRM5 activity and is useful in determining whether an individual
CC has one of the haplotypes or one of the haplotype pairs. The invention is
CC useful in a variety of diagnostic and prognostic formats and therapeutic
CC methods. The invention is also useful in genotyping and/or haplotyping
CC the CHRM5 gene in an individual. The present nucleic acid sequence
CC represents one of a collection of allele-specific oligonucleotide (ASO)
CC probes (ABK81765-ABK81774) that were used in the invention to detect
CC polymorphisms in the human CHRM5 gene

CC The invention comprises DNA, cDNA and protein sequences of the human
 CC electron-transfer Flavoprotein, beta polypeptide (ETPB) gene (located on
 CC chromosome 19q13.3-13.4). The invention specifically relates to the
 CC identification of 27 novel polymorphic sites within the ETPB gene.
 CC Electron-transfer flavoprotein (ETP) is an obligatory electron acceptor
 CC for nine primary flavoprotein dehydrogenases and is located in the
 CC mitochondrial matrix. ETP is composed of an alpha (ETPA) and a beta
 CC (ETPB) subunit. Electrons accepted by ETP are transferred to the
 CC mitochondrial respiratory chain by ETP dehydrogenase (ETPDhe).
 CC Deficiency of ETP or ETPDH leads to glutaric acidemia type II (GAI1).
 CC Therefore ETPB is a pharmaceutically-important gene in the treatment of
 CC GAI1. The novel ETPB polymorphisms identified in the invention are useful
 CC for genotyping and haplotyping the ETPB gene of an individual. The ETPB
 CC protein and nucleic acids of the invention are useful for studying the
 CC expression and function of ETPB in vivo. The ETPB protein and nucleic
 CC acids are also useful for testing the efficacy of therapeutic agents and
 CC compounds for glutaric acidemia type II. The nucleic acids of the
 CC invention are useful in the production of a transgenic animal expressing
 CC the ETPB gene. Nucleic acids AB13914-AB13940 represent claimed ETPB
 CC allele-specific probes. Nucleic acids AB13941-AB13949 represent claimed
 CC ETPB allele-specific PCR primers. Nucleic acids AB13945-AB13958
 CC represent claimed ETPB primer-extension oligonucleotides

 PT New genetic variants having polymorphisms in the human interleukin 12B
 PT (IL12B) gene, useful for studying the function of IL12B, and for treating
 PT disorders affected by expression or function of the IL12B isogene.
 CC
 PS Claim 16; Page 13; 95pp; English.
 XX

The invention relates to an isolated polynucleotide, comprising genes and
 haplotypes of the interleukin 12B (IL12B) gene. The polynucleotide
 comprises polymorphic sites in the IL12B gene, referred to as P51-11. The
 observed and identified haplotypes, isogenes and polymorphisms of the

IL12B gene, as well as the locations of these polymorphisms, are fully defined in a table in the specification. Also described is an isolated polypeptide comprising an amino acid sequence which is a polymorphic variant of a reference sequence for the IL12B protein or its fragment. Polynucleotides comprising a polymorphic gene variant or fragment may be used for therapeutic purposes, where a patient could benefit from expression or increased expression of a particular IL12B protein isoform, or an expression vector encoding the isoform may be administered to the patient. IL12B peptide variants may be used to as antigens to generate antibodies specific for the IL12B isoforms, and in drug screening assays. Compositions comprising the polynucleotide of the isogenes may be used to treat disorders affected by expression or function of the IL12B-isogene. ABK34177-ABK34231 represent human interleukin 12B gene, allele-specific oligonucleotides of the invention

PT Enzymatic nucleic acid molecules able to cleave separate RNA molecules
PT are used for treating cancer, Alzheimer's disease, hepatitis, diabetes,
PT obesity and heart disease.
XX
PS Example 16; Page 619; 717pp; English.
XX
XX The present invention relates to the use of enzymatic nucleic acid
CC molecules (e.g. ribozymes) to modulate gene expression. The invention
CC also methods for their use to down regulate or inhibit the expression of
CC genes encoding protein-tyrosine-phosphatase-1b (PTB-1b), methionine
CC aminopeptidase (MeAP-2), human telomerase (hTERT), protein kinase C
CC alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor
CC receptor-2 (HER2/c-erb2/neu), phospholamban (PLN), presenilin-1 (ps-1),
CC presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic
CC nucleic acid molecules used to inhibit the expression of the said genes
CC include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme,
CC zincyme, and/or DNAzyme motifs. The methods of the invention are useful
CC for treating cancer, in particular breast cancer, Alzheimer's disease,
CC diabetes, obesity, cardiac diseases e.g. heart disease, age-related
CC diseases, hepatitis B infections, and hepatitis and hepatocellular
CC carcinoma. The enzymatic nucleic acid molecules can also be used as
CC diagnostic tools to examine genetic drift and mutations within diseased
CC cells and to detect the presence of specific RNA in a cell. The present
CC sequence represents a substrate/target sequence for a ribozyme used in
CC the examples of the present invention. Note: Some SEQ ID Nos are repeated
CC more than once in the specification, but these have different sequences
CC associated with them.

PT in studying expression and function of protein and for screening drugs to
PT treat diseases e.g. reproduction disorders.
XX
PS Claim 16; Page 13; 64pp; English.
XX
XX The invention relates to genetic variants of human gonadotropin-
CC releasing hormone 2 (GNRH2) gene. The invention also relates to
CC compositions and methods for haplotyping and/or genotyping the GNRH2 gene
CC in an individual. Polynucleotides of the invention are useful for
CC studying the expression and function of GNRH2 and in expressing GNRH2
CC proteins for use in screening candidate drugs to treat diseases related
CC to GNRH2 activity. They are also used in gene therapy. The methods of the
CC invention are useful in determining whether an individual has a haplotype
CC or haplotype pairs. The haplotyping method is useful for improving the
CC efficiency and reliability of several steps in the discovery and
CC development of drugs for treating diseases associated with GNRH2
CC activity, e.g., reproductive disorders. The present sequence is an allele
CC specific oligonucleotide (ASO) primer used for detecting human GNRH2 gene
CC polymorphisms

Enzymatic nucleic acid molecules able to cleave separate RNA molecules				
are used for treating cancer, Alzheimer's disease, hepatitis, diabetes,				
obesity and heart disease.				
Example 7; Page 494; 717pp; English.				

ID	Sequence	Similarity	Score	DB	Length
CC	alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor				
CC	receptor-2 (HER2/c-erbB2/neu), phospholamban (PLN), presenilin-1 (ps-1),				
CC	presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic				
CC	nucleic acid molecules used to inhibit the expression of the said genes				
CC	include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme,				
CC	zinczyme, and/or DNzyme motifs. The methods of the invention are useful				
CC	for treating cancer, in particular breast cancer, Alzheimer's disease,				
CC	diabetes, obesity, cardiac diseases e.g. heart disease, age-related				
CC	diseases, hepatitis B infections, and hepatitis and hepatocellular				
CC	carcinoma. The enzymatic nucleic acid molecules can also be used as				
CC	diagnostic tools to examine genetic drift and mutations within diseased				
CC	cells and to detect the presence of specific RNA in a cell. The present				
CC	sequence represents a substrate/target sequence for an anti-HER2 NCH				
CC	ribozyme used in the examples of the present invention. Note: Some SEQ ID				
CC	nos are repeated more than once in the specification, but these have				
CC	different sequences associated with them.

PT inhibits or reduces growth factor mediated cell proliferation and/or
PT inflammation.
XX
XX Example 7; Page 58; 201pp; English.
XX
XX The present invention relates to a method for ameliorating the effects of
CC skin disorders. The method comprises contacting the skin with an
CC antisense oligonucleotide, (for Insulin-like Growth Factor [IGF]-1
CC receptor, IGF binding protein [IGFBP]-2 or IGFBR3), which is capable of
CC inhibiting or reducing growth factor mediated cell proliferation,
CC inflammation and/or other disorders. The present sequence is an
CC oligonucleotide which can be used to design the antisense
CC oligonucleotides of the present invention (see AAF45151 and AAF45153-
CC P45161). The method is useful for ameliorating the effects of psoriasis,
CC ichthyosis, pteryiasis, ruba, pilaris, serborrhoea, keloids, keratosis,
CC neoplasias, scleroderma, warts, benign growths, cancers of the skin, a
CC hypervascular condition such as a neovascular condition of the retina,
CC brain or skin, growth factor-mediated malignancies, other sclerotic
CC disease, kidney disease, hyperproliferation of the inside of blood
CC vessels or any other hyperplasia

XX CC The present sequence represents a preferred target sequence for an
CC enzymatic nucleic acid (i.e. a ribozyme) which cleaves TNF-alpha mRNA at
CC the nucleotide base position indicated in the DE line. Regions of the
CC mRNA that do not form secondary folding structures and that contain

CC potential hammerhead and hairpin ribozyme cleavage sites were identified
CC by computer analysis. Ribozymes directed against these mRNA sequences
CC were designed and synthesised with modifications that improve their
CC nuclease resistance. The ribozymes are designed to cleave the target
CC sequences and thereby inhibit TNF-alpha expression, making them
CC potentially useful for treating rheumatoid arthritis, septic shock and
CC other inflammatory disorders including psoriasis, as well as for
CC treatment of AIDS. (Updated on 25-MAR-2003 to correct PI field.)

XX
XX New oligonucleotide primers for diagnosis of genetic diseases and traits
PT in dogs - amplify specific regions of the genome containing
PT microsatellite repeats, especially for diagnosing copper toxicosis and
PT carriers.
XX
XX Claim 1; Page 18; 40pp; English.
XX
XX This invention relates to novel oligonucleotide PCR primers which may be
CC used to identify markers associated with genetic diseases and traits in
CC dogs, in particular to diagnose genetic diseases that are not
CC phenotypically visible and to identify carriers of recessive diseases. A
CC specific application is diagnosis of copper toxicosis (CT). The invention
CC can also be used to create a genetic map of the canine genome; to
CC generate breed-specific profiles; to establish paternity and to identify
CC dogs from DNA fingerprints. The method provides rapid analysis of the
CC target sequences from only a small sample of DNA. Diagnosis can be done
CC at any time in the dog's life. The present sequence is that of a PCR
CC primer of the invention.

PT New polynucleotides and polypeptides of the Granulocyte Chemotactic
PT Peptide-2 gene, useful for preparing a medication for the prevention or
PT treatment of disorders involving the immune system, e.g. inflammation,
PT psoriasis or cancer.

PS Example 1; Page 23; 29pp; English.

CC The invention relates to polynucleotides derived from the Granulocyte
CC Chemotactic Peptide-2 (GCP-2) gene, and comprising new single nucleotide
CC polymorphisms (SNPs) where the SNPs are 1254-1255 Ins (C), g563c, c574g,
CC c646g, g742t, a1026t or g1069c. The polynucleotide, polypeptide, vector,
CC host cell and/or antibody are useful for preparing a medication for the
CC prevention or treatment of diseases or disorders involving the immune
CC system, inflammation, tumor cell invasion, psoriasis, rheumatoid
CC arthritis, chronic polyarthritis, myelodysplastic syndrome, or carcinoma
CC (e.g. hepatocellular carcinoma or osteosarcoma). The GCP-2 protein is
CC also used for preparing a medication against a disease or disorder caused
CC by a GCP-2 variant. Sequences ACC78168-169 represent PCR primers for
CC amplifying the human GCP-2 SNPs g563c, c574g, c646g and g742t

XX The invention relates to a method of remodeling a dendrite comprising

CC transfecting a dendrite with an RNA comprising at least one intron, where

CC the dendrite comprises at least one component of a spliceosome and

CC further where the component of a spliceosome is capable of splicing an

CC RNA, allowing the RNA comprising at least one intron to be translated by the

CC spliceosome components and allowing the spliced RNA to be translated in

CC the dendrite, where the dendrite is thus remodeled as a consequence of

CC the translation. The invention also relates to a method of remodeling a

CC dendrite interaction, a method of remodeling a synaptic network

CC comprising interaction with at least one dendrite, methods of splicing an

CC RNA and methods of translating an RNA. The splicing and translating

CC methods can alternatively be applied to an isolated synapsonosome

CC instead of the isolated dendrite. The methods are useful for remodeling a

CC dendrite, preferably for remodeling a synaptic network. This sequence

CC represents DNA encoding dendritically-spliced RNA used in the method of

CC the invention.

PT homologous to TRIC-HU

PT and myocarditis.

PS Example 2; SEQ ID NO 269; 822pp; English.

PS Example 2; SEQ ID NO 269; 822pp; English.

CC The present invention relates to a chimeric polypeptide (I) useful as a
CC biomarker for cardiac disease chosen from a chimeric polypeptide of SEQ
CC ID Nos. 301, 302, 303 or 304, comprising a first amino acid sequence
CC being at least 90% homologous to amino acids 1-124, 1-6, 1-36 or 1-8 of
CC TRIC HUMAN, and a second amino acid sequence at least 95% homologous to a
CC polypeptide sequence corresponding to amino acids 125-137, 35-209, 37-86
CC or 9-13 of SEQ ID Nos. 301, 302, 303 or 304, where the first and second
CC amino acid sequence are contiguous and in a sequential order. (I) also
CC comprises an isolated polypeptide comprising a protein variant of SEQ ID
CC Nos. 301-304, or the sequence of tropoin I variant (SEQ ID Nos. 325, 354
CC 356 or 387). (I) can be an isolated polypeptide for a tail of SEQ ID No.
CC 301, 303 or 304, and an isolated chimeric polypeptide encoding for an
CC edge portion of SEQ ID No. 302, where at least two amino acids comprise
CC AK. Also claimed is an isolated polynucleotide (II) comprising a
CC transcript or the DNA sequence of Histioponin T7 PRESENT, (SEQ ID Nos. 22-
CC 25, 353 or 386), or a segment chosen from a SEQ ID Nos. 130-149; an
CC isolated oligonucleotide, comprising an amplicon (III) chosen from a
CC sequence of humntropia seg1 amplicon, humntropia seg2 amplicon, amplicon
CC humntropia seg33-24-25 (SEQ ID No. 379, 382 or 385); a primer pair (IV),
CC capable of amplifying (III); an antibody (V); a kit (VI) for detecting (I)
CC heart disorders, by detecting overexpression of a splice variant of (I)
CC or (II); detecting (MI) heart disorders, by detecting overexpression of a
CC splice variant of (I) or (II); and a biomarker (VII) capable of detecting
CC heart disorders. The heart disorder is a myocardial infarct, angina
CC pectoris, cardiomyopathy, myocarditis, congestive heart failure.
CC Identification of differentially expressed gene products and ESTs was
CC carried out by algorithm method and computer analysis. Splice variants
CC were identified by using the LEADS software package. The present sequence
CC is a human myosin heavy chain protein transcript.

Remodeling a dendrite, e.g. a synaptic network of the dendrite, comprises transcribing a dendrite with an RNA comprising at least one intron, where the dendrite comprises a spliceosome that is capable of splicing an RNA.

CC include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme,
CC zinzyme, and/or DNAzyme motifs. The methods of the invention are useful
CC for treating cancer, in particular breast cancer, Alzheimer's disease,
CC diabetes, obesity, cardiac diseases e.g. heart disease, age-related
CC diseases, hepatitis B infections, and hepatitis and hepatocellular
CC carcinoma. The enzymatic nucleic acid molecules can also be used as
CC diagnostic tools to examine genetic drift and mutations within diseased
CC cells and to detect the presence of specific RNA in a cell. The present
CC sequence represents a substrate/target sequence for an anti-HER2 NCH
CC ribozyme used in the examples of the present invention. Note: Some SEQ ID
CC Nos are repeated more than once in the specification, but these have
CC different sequences associated with them.

PT New ribozymes targeting RNA derived from hepatitis C virus inhibit viral
PT replication and are useful to treat hepatitis C virus infections and
PT cirrhosis, liver failure or hepatocellular carcinoma.
XX
PS Claim 1; Page 47; 80pp; English.
XX
CC The present invention relates to enzymatic nucleic acids which
CC specifically cleave RNA derived from hepatitis C virus (HCV). The
CC enzymatic nucleic acid or ribozyme is in a hammerhead (HH) or hairpin
CC (HP) motif where the binding arms comprise sequences complementary to one
CC of the substrate sequences defined in the specification. The HCV
CC ribozymes are useful for modulating the expression and/or replication of

CC HCV. They can be used to treat cirrhosis, liver failure and/or
CC hepatocellular carcinoma. The HCV ribozymes are also useful for treating
CC a condition associated with HCV infection in conjunction with one or more
CC other drug therapies, particularly type I interferon, especially
CC interferon alpha, beta or gamma or consensus interferon. The present
CC sequence represents a substrate for a HCV hammerhead (HH) ribozyme. Note:
CC Some of the sequence data for this patent did not form part of the
CC printed specification. The complete sequence data for this patent was
CC obtained in electronic format directly from the USPTO web site at
CC seqdata.uspto.gov/patids/entry.html

XX	PS	polymorphisms.
XX	PS	Claim 15; Page 46; 53pp; English.
CC	XX	This sequence is a the human cholinergic receptor, muscarinic 5 (CHRM5)
CC	CC	gene, allele specific oligonucleotide. The invention relates to a
CC	CC	polymorphic variant of the CHRM5 gene sequence. The polymorphic sequence
CC	CC	is useful to genotype or haplotype the CHRM5 gene, to predict a haplotype
CC	CC	pair for the CHRM5 gene, and for identifying an association between a
CC	CC	trait (such as a clinical response to a drug targeting CHRM5). It is also
CC	CC	useful in gene therapy in patients who lack the CHRM5 isogene or have
CC	CC	only one copy of it, and in assays to measure the binding affinities of
CC	CC	one or more candidate drugs targeting CHRM5. The DNA sequence is used in
CC	CC	the treatment of disorders affected by expression or function of a novel
CC	CC	CHRM5 isogene of the invention. The protein encoded by the CHRM5 variant
CC	CC	is useful to identify drugs which target the CHRM5 polymorphic variant
CC	CC	protein. Antibodies against the protein can be used to neutralise the
CC	CC	CHRM5 isoform actively expressed in an individual, and is useful in
CC	CC	detection of CHRM5 in immunocytochemical, immunohistochemical and
CC	CC	immunofluorescence. A composition containing a genotyping oligonucleotide
CC	CC	for detecting a polymorphism in the CHRM5 gene is used to detect novel
CC	CC	CHRM5 polymorphisms of the invention

PT Novel polymorphic variant of reference sequence for human cholinergic
PT receptor, muscarinic 3 gene, useful for diagnostic and therapeutic
PT purposes.
XX

PS Claim 15; Page 19; 54pp; English.
XX
CC The patent relates to polymorphic variants of human cholinergic receptor,
CC muscarinic 3 (CHRM3) gene. The polymorphic variant comprises at least one
CC single nucleotide polymorphism selected from cytosine at PS1, adenine at
CC PS2 or PS3, and cytosine at PS4. The invention also relates to a method
CC for genotyping and haplotyping the CHRM3 gene for identification of
CC variants. The polymorphic variant is useful for therapeutic purposes, for
CC studying the expression and biological function of CHRM3, as well as for
CC developing drugs targeting the CHRM3 protein. The variant is also useful
CC in diagnostics and forensic applications. The recombinant nonhuman
CC organism transfected with the polymorphic variant is useful for studying
CC expression of CHRM3 isogenes in vivo, for in vivo screening and testing
CC of drugs targeted against CHRM3 protein, and for testing the efficacy of
CC therapeutic agents and compounds for Alzheimer's disease, Sjogren's
CC syndrome, disorders associated with smooth muscle contractility and
CC sudden infant death syndrome. The CHRM3 protein variant is useful in drug
CC screening assays and its antibodies are useful in immunoassays to detect
CC CHRM3 protein variants in biological samples. The present sequence is an
CC allele-specific oligonucleotide (ASO) probe used for detecting human
CC CHRM3 gene polymorphism

XX
XX Novel ribozymes for the treatment of diseases and conditions related to
XX hepatitis C infection.
XX
XX Claim 1; Page 80; 123pp; English.
XX
XX The present sequence represents the preferred target sequence of an
XX enzymatic nucleic acid, especially a hammerhead ribozyme, which cleaves
XX the Hepatitis C virus (HCV) RNA sequence at the base position given in
XX the descriptor line. The HCV sequence was screened for optimal ribozyme
XX target sites using a computer folding algorithm and regions of the mRNA
XX which did not form secondary folding structures and contained potential
XX ribozyme cleavage sites were identified. Ribozymes were synthesised to
XX target these sites and their activities optimised by either varying the
XX length of the binding arms or by modification to prevent degradation by
XX nucleases. The ribozymes of the invention inhibit gene expression and/or
XX viral replication, and are used to treat diseases associated with
XX Hepatitis C virus (HCV) infection, e.g. cirrhosis, liver failure and
XX hepatocellular carcinoma. The ribozymes may be used in combination with
XX interferon to treat HCV infection, other infectious diseases, autoimmune
XX diseases, and cancer

XX
XX New variants of phosphorylase kinase gamma 2 isogenes, useful for
XX improving efficiency and reliability in the development of drugs for
XX treating diseases e.g. liver cirrhosis.
XX
XX Claim 16; Page 13; 76pp; English.
XX
XX The present invention describes an isolated polynucleotide (I) comprising
XX a nucleotide sequence which is a polymorphic variant of a reference
XX sequence for human phosphorylase kinase gamma2 (testis) (PHKG2) gene or
XX its fragment, or a polymorphic variant of a reference sequence for a
XX PHKG2 cDNA or its fragment. Also described is an isolated polypeptide
XX (II) comprising an amino acid sequence which is a polymorphic variant of
XX a reference sequence for PHKG2 protein or its fragment, where the
XX reference sequence comprises a sequence (see ABB09290) of 406 amino
XX acids, and the polymorphic variant comprises one or more variant amino
XX acids selected from glutamic acid at a position corresponding to amino
XX acid position 153 and tryptophan at position corresponding to amino acid
XX position 339. (I) has hepatotropic activity and can be used in gene
XX therapy. (II) is useful in screening for drugs targeting (II), by
XX contacting a PHKG2 polymorphic variant with a candidate agent and
XX assaying for binding activity. The identified candidate agents targeting
XX PHKG2, are useful for treating liver cirrhosis and glycogen storage
XX diseases. The present sequence represents an allele specific
XX oligonucleotide (ASO) primer for the PHKG2 gene, which is used in the
XX exemplification of the present invention

XX
XX Enzymatic nucleic acid molecules having a hammer-head motif - used for
XX the treatment of arthritis, induction of graft tolerance or treatment of
XX auto-immune diseases.
XX
XX Claim 10; Page 167; 307pp; English.
XX
XX The present invention describes a novel enzymatic nucleic acid (ENA)
XX having a hammerhead motif (HM) comprising: (i) at least 5 ribose residues
XX; (ii) a 2'-C-allyl modification at position 4 of the ENA; (iii) at least
XX ten 2'-O-methyl modifications; and (iv) a 3'-end modification. The ENA's
XX can inhibit collagenase and stromelysin production in the synovial
XX membrane of joints for the treatment or prevention of arthritis,
XX particularly osteoarthritis or rheumatoid arthritis. The ENA's can also
XX be used to treat antigen presenting cells of a donor to induce tolerance
XX in a recipient to an alloantigen of a donor. They can also be used for
XX enhancing graft tolerance or for treating autoimmune disease, and for
XX treating allergies and other inflammatory conditions. The ENA's can also
XX be used in diagnosis. Ribozyme therapy impacts on the expression of
XX CC stromelysin without introducing the non-specific effects upon gene
XX expression which accompany treatment with retinoids and dexamethasone.
XX CC The concentration of ribozyme required to affect a therapeutic treatment
XX is lower than that required of antisense molecules, and is highly
XX specific. The present sequence is used in the exemplification of the
XX present invention

PT	Genotyping blood cell antigens, by amplifying and detectably labeling DNA
PT	by multiplex PCR at region of locus of blood cell antigen containing
PT	nucleotide polymorphism, determining genotype for blood cell antigens
XX	using chimeric primers.
PS	
XX	Claim 13; SEQ ID NO 95; 80pp; English.
XX	
CC	The invention relates to genotyping (M1) blood cell antigens, comprising
CC	subjecting DNA from the individual to a multiplex PCR to amplify (and
CC	detectably label) a region of the locus of different blood cell antigens
CC	containing the site of a nucleotide polymorphism (arranged in an array)
CC	and using the amplified and labeled DNA fragments to determine the
CC	genotype for each of the blood cell antigens, using a pair of blood cell
CC	antigen-specific chimeric primers and a detectably labeled universal
CC	primer. Also included are a kit (I) for genotyping blood cell antigens by
CC	(M1) (comprising a pair of blood cell antigen-specific chimeric primers
CC	for each blood cell antigen to be genotyped and a detectably labeled
CC	universal primer, preferably a pair of detectably labeled universal
CC	primers), a set of blood cell antigen-specific chimeric primer pairs
CC	useful in a multiplex PCR (comprising at least two, preferably
CC	substantially all of chimeric primers) and a set of blood cell antigen
CC	allele-specific oligonucleotide probes useful for genotyping blood cell
CC	antigens. (M1) enables genotyping of large number of blood cell antigens
CC	and is a practical, rapid and reliable method for analyzing the
CC	hybridization results to assign the clinically relevant blood cell
CC	antigen genotypes. The present sequence is a blood group antigen specific
CC	probe useful in the method of the invention.

XX	PT	Genotyping blood cell antigens, by amplifying and detectably labeling DNA
XX	PT	by multiplex PCR at region of locus of blood cell antigen containing
XX	PT	nucleotide polymorphism, determining genotype for blood cell antigens
XX	PT	using chimeric primers.
XX	PS	Claim 13; SEQ ID NO 102; 80pp; English.
XX	CC	The invention relates to genotyping (M1) blood cell antigens, comprising
XX	CC	subjecting DNA from the individual to a multiplex PCR to amplify (and
XX	CC	detectably label) a region of the locus of different blood cell antigens
XX	CC	containing the site of a nucleotide polymorphism (arranged in an array)
XX	CC	and using the amplified and labeled DNA fragments to determine the
XX	CC	genotype for each of the blood cell antigens, using a pair of blood cell
XX	CC	antigen-specific chimeric primers and a detectably labeled universal
XX	CC	primer. Also included are a kit (1) for genotyping blood cell antigens by
XX	CC	(M1) (comprising a pair of blood cell antigen-specific chimeric primers
XX	CC	for each blood cell antigen to be genotyped and a detectably labeled
XX	CC	universal primer, preferably a pair of detectably labeled universal
XX	CC	primers), a set of blood cell antigen-specific chimeric primer pairs
XX	CC	useful in a multiplex PCR (comprising at least two, preferably
XX	CC	substantially all of chimeric primers) and a set of blood cell antigen
XX	CC	allele-specific oligonucleotide probes useful for genotyping blood cell
XX	CC	antigens. (M1) enables genotyping of large number of blood cell antigens
XX	CC	and is a practical, rapid and reliable method for analyzing the
XX	CC	hybridization results to assign the clinically relevant blood cell
XX	CC	genotypes. The present sequence is a blood group antigen specific
XX	CC	probe useful in the method of the invention.

XX The invention relates to a novel probe set used for identifying human
 CC leukocyte antigen-contribution of MHC class I chain-related-A (HLA-MICA)
 CC alleles in a test substance. The probe set comprises several probes,
 CC where each probe has a partial sequence containing bases represented in
 CC capital letters in a fully defined HLA-MICA allele list, given in the
 CC specification. The probe set can identify a HLA-MICA allele in patients
 CC with an organ transplant, cancer, diabetes and other multiple-factor
 CC diseases, and enables the provision of tailored medical treatment to
 CC individual patients. This oligo sequence represents a probe used in the
 CC detection of a HLA-MICA allele of the invention.

XX PT useful for diagnosing or developing a compound for treating inflammatory
XX PT bowel diseases or related disease e.g., Crohn's disease and ulcerative
XX PT colitis.
XX
XX PS Example 1; SEQ ID NO 5; 63pp; English.
XX
XX CC This invention relates to a novel diagnostic composition that comprises
XX CC nucleic acid molecules bound to a solid support (or microarray), wherein
XX CC each nucleic acid can hybridise to an mRNA of a gene that shows abnormal

CC expression in an gastrointestinal condition. Specifically, it refers to
CC DNA oligos useful for preparing a microarray chip for the diagnosis of
CC inflammatory bowel disease, Crohn's disease, ulcerative colitis or a
CC disposition thereof. The present invention describes nucleic acid
CC molecules useful for screening methods to identify compounds that can be
CC used for therapy or to prevent progression of the aforementioned
CC conditions. As such, the pharmaceutical compositions developed
CC accordingly exhibit antiinflammatory and anticancer activities. This
CC oligonucleotide sequence is an RT-PCR primer used to amplify a human DNA

 XX PT Novel enzymatic nucleic acids, ribozymes, which modulate expression of
 PT genes encoding vascular endothelial growth factor and/or VEGF receptor,
 PT useful for inhibiting tumor angiogenesis in cell, and for treating
 PT cancer.
 PS Disclosure; SEQ ID NO 892; 172pp; English.

The invention relates to enzymatic nucleic acids (I) i.e.
 encoding ribozymes/DNAzymes/Zinzymes that target and modulate expression of, genes
 encoding vascular endothelial growth factor (VEGF) and/or VEGF receptor
 (VEGFR1 and 2 encode by the Flt-1 and Kdr genes respectively). Also
 included are a composition comprising (I) and a carrier, administering
 (I) to a cell (by contacting the cell with the compound under conditions
 suitable for the administration), administering (I) to a cell (in
 conjunction with one or more other drug by contacting the cell with the
 compound and the other drug under conditions suitable for the
 administration), administering (I) to a mammal (by contacting the mammal
 with the compound under conditions suitable for the administration),
 treating (M1) a subject having endometriosis (by contacting a subject
 with, or administering to subject, a nucleic acid molecule (II) that
 modulates expression of VEGF, VEGFR1, and/or VEGFR2), a mammalian cell
 (II) comprising (I) and administering to a mammal (I) (in conjunction
 with a chemotherapeutic agent comprising contacting the mammal with the
 compound and the chemotherapeutic agent under conditions suitable for the
 administration). (I) is administered to a mammalian cell, preferably
 human cell in the presence of a delivery reagent which is a lipid such as
 cationic lipid or phospholipid, or a liposome. The enzymatic nucleic acid
 molecule has an endonuclease activity to cleave RNA encoded by an VEGFR1
 and/or VEGFR2 gene, and is in a hammerhead, inozyme, DNAzyme, G-cleaver,
 or Ambertzyme configuration. The enzymatic nucleic acids are useful for
 inhibiting ocular angiogenesis associated with diabetic retinopathy or
 age-related diabetic retinopathy, in a subject. They are also useful for
 inhibiting angiogenesis, preferably tumor angiogenesis in cell, and for
 treating a subject having a condition associated with an increased level
 of VEGF receptor, where the condition is cancer, e.g. breast cancer, lung
 cancer (such as non-small cell lung carcinoma), colorectal cancer, renal
 cancer (such as renal cell carcinoma), pancreatic cancer. The enzymatic
 nucleic acids are useful for treating a subject (preferably human) having
 endometriosis, psoriasis, age-related macular degeneration, proliferative
 diabetic retinopathy, hypoxia-induced angiogenesis, rheumatoid arthritis,
 wound healing, endometrial carcinoma, gynecologic bleeding disorders,

CC irregular menstrual cycles, ovulation, premenstrual syndrome, and
 CC menopausal dysfunction. The enzymatic nucleic acids are useful for birth
 CC control by inhibiting ovulation or embryonic uterine implantation. The
 CC present sequence is a target sequence from the human VEGFR1/Flt-1 mRNA.

 PT LAMP nucleic acid amplification primers for detection of cytokeartin
 PT expression as indicator in diagnosis of tumour metastasis.
 XX
 PS Claim 3; SEQ ID NO 192; 266pp; Japanese.

The invention relates to novel nucleic acid amplification primers for the
 detection of human cytokeartin (CK) 18, 19 or 20 expression by the LAMP
 (loop mediated isothermal amplification) method. The primers of the
 CC invention may be useful for the detecting cytokeartin 18-20 expression as
 CC an indicator for the diagnosis of tumour metastasis, particularly
 CC prostate cancer and lymphoma. The amplification using the primers is
 CC highly efficient and allows very sensitive detection of tumour
 CC metastasis. The current sequence is that of the human CK18-related PCR
 CC primer of the invention.

 XX PT Novel enzymatic nucleic acid that down-regulates expression of neurite
 PT growth inhibitor receptor, prostaglandin D2 receptor, Ikappab kinase or
 PT protein kinase PKR genes, for treating cancer and inflammatory disease.
 XX PS Claim 59; SEQ ID NO 3646; 317bp; English.
 XX CC The invention comprises nucleic acids (e.g. antisense oligonucleotides)
 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC Ikappab kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human PKR
 CC substrate sequence.

 CC that down regulate the expression or inhibit the function of a receptor
 CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
 CC Ikappab kinase (IKK), or protein kinase PKR. The nucleic acids of the
 CC invention are useful for treating: cerebrovascular accident, central
 CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
 CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
 CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
 CC disease, lupus, multiple sclerosis, transplant/graft rejection,
 CC ischemia/reperfusion injury, glomerulonephritis, sepsis, and allergic
 CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
 CC nucleic acids of the invention are also useful for down-regulating the
 CC expression of a target gene and as a diagnostic tool to examine genetic
 CC drifts and mutations within diseased cells or to detect the presence of a
 CC target RNA in a cell. The present RNA sequence represents a human PKR
 CC substrate sequence.

PT New isolated nucleic acid, useful for treating viral diseases associated
PT with tumors and cell degeneration, also related polypeptides, antibodies
PT and transfected cells.

PS Disclosure; SEQ ID NO 2200; 30pp; French.

CC This invention relates to novel isolated nucleic acid sequences involved
CC in the phenomena of tumour suppression, tumour reversion, apoptosis
CC and/or resistance to viruses. The invention may be useful for the
CC development of compounds with a cytostatic, virucide, neuroprotective,
CC nootropic or neuroleptic activity. The DNA sequences may be useful as
CC probes and primers for detecting, identifying, quantifying and/or
CC amplifying nucleic acid, for example as one component of a gene chip, in
CC vitro as antisense reagents and for production of recombinant
CC polypeptides. The invention may therefore be useful for preparation of
CC pharmaceuticals for prevention and/or treatment of viral diseases that
CC are characterised by development of tumours or cell degeneration,
CC specifically cancer but also Alzheimer's disease and schizophrenia. The
CC present sequence is that of a nucleic acid sequence of the invention.
CC Note: The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/publishedpct_sequences

PT Use of non-viral agents for treating acne or acneform skin conditions,
PT particularly antisense oligonucleotides directed against androgen
PT receptor or Salpha reductase.

PS Example 1; Page 18; 36pp; German.

CC This invention describes a novel method for treatment of acne and
CC acneform skin disorders, including rosacea, using a non-viral active
CC agent, prepared by molecular biological methods. The method comprises an
CC antisense oligonucleotide; (stabilised) ribozyme; (mirror) aptamer;
CC chimeric RNA/DNA oligonucleotide; naked plasmid DNA or DNA encapsulated
CC in a liposome, especially an antisense oligonucleotide specific for a
CC gene that encodes a steroid hormone receptor or steroid hormone
CC metabolising enzyme, particularly the androgen receptor and/or Salpha-
CC reductase. The products of the invention have dermatological and
CC antiestrogenic activity and can inhibit the androgen-induced stimulation
CC of sebaceous gland activity. The method of the invention provides
CC difficulties associated with reduced side effects and without the
CC represents a RT-PCR primer used to amplify the beta-actin gene, which is
CC used as a control during the amplification of the human androgen receptor
CC described in the disclosure of the invention

XX New human sodium-hydrogen exchanger like protein 1 (NHEPL1), useful as a
XX passive replacement therapy or as a vaccine for treating or preventing
XX disorders associated with aberrant expression or activity of human
XX NHEPL1.
XX
XX Example 2; SEQ ID NO 600; 468bp; English.
XX
XX The invention relates to a nucleic acid molecule which encodes a Na+/H+
XX exchanger like protein (NHEPL1). The NHEPL1 nucleic acid molecule, NHEPL1
XX polypeptide, an antibody against the protein or its antigen-binding
XX fragment is useful in therapy. The NHEPL1 nucleic acid molecule, NHEPL1
XX polypeptide and an agonist are particularly useful for manufacturing a
XX medicament for treating or preventing a disorder associated with
XX decreased expression or activity of human NHEPL1. The antibody or its
XX antigen-binding fragment, and an antagonist are useful for manufacturing
XX a medicament for treating or preventing a disorder associated with
XX increased expression or activity of human NHEPL1. The NHEPL1 nucleic acid
XX or protein is useful as passive replacement therapy, as a vaccine, or in
XX diagnostic methods. This sequence corresponds to a 17-mer oligonucleotide
XX spanning the sequence of the human NHEPL1 gene (ADC03514).

XX New isolated nucleic acid molecule encoding a human angiominin-like

PT protein, useful for treating or preventing a disorder associated with

PR decreased or increased expression or activity of AMLP1.

PS Example 2; SEQ ID NO 169; 172pp; English.

XX The present invention describes the human angiominin-like protein 1

CC (AMLPI). human AMLPI has cytostatic activity, and can be used in gene

CC therapy. The AMLPI protein, nucleic acid molecules, antibodies, and

CC compositions of the present invention can be used for treating or

CC preventing a disorder associated with decreased or increased expression

CC or activity of AMLPI. The present sequence represents a scanning

CC oligonucleotide for human AMLPIA, which is used in an example from the

CC present invention.

PS The present invention relates to nucleic acid molecules which modulate

CC the synthesis, expression and/or stability of Hepatitis C virus (HCV) or

CC Hepatitis B virus (HBV) RNA. The nucleic acid molecules include antisense

CC and enzymatic nucleic acids such as hammerhead ribozymes, DNAsymes,

CC inozymes, zincymes, amberzymes, and G-cleaver ribozymes. Also disclosed

CC are nucleic acid decoy molecules and aptamers that bind to HBV reverse

CC transcriptase and/or HBV reverse transcriptase primer sequences, as well

CC as oligonucleotides that specifically bind the Enhancer 1 region of HBV

CC DNA. The nucleic acids may be used to modulate the expression of HBV

CC genes and HBV viral replication. Also disclosed is a method for screening

CC compounds and/or potential therapies directed against HBV, and compounds

CC that modulate the expression and/or replication of HCV. The compounds and

CC methods of the invention are useful for the treatment of degenerative and

CC disease states related to HBV and HCV infection, replication and gene

CC expression such as cirrhosis, liver failure, and hepatocellular

CC carcinoma. The present sequence represents a substrate for one of the HCV

CC DNAsyme or minus strand DNAsyme sequences disclosed in the present

CC invention

PT Novel compound useful for treating cirrhosis, liver failure,
PT hepatocellular carcinoma, or condition associated with hepatitis C virus
PT infection.
XX
PS Example 1; Page 148; 387pp; English.

CC The present invention relates to nucleic acid molecules which modulate
CC the synthesis, expression and/or stability of Hepatitis C virus (HCV) or
CC Hepatitis B virus (HBV) RNA. The nucleic acid molecules include antisense
CC and enzymatic nucleic acids such as hammerhead ribozymes, DNzymes,
CC inozymes, zinzymes, amberzymes, and G-cleaver ribozymes. Also disclosed
CC are nucleic acid decoy molecules and aptamers that bind to HBV reverse
CC transcriptase and/or HBV reverse transcriptase primer sequences, as well
CC as oligonucleotides that specifically bind the Enhancer I region of HBV

CC DNA. The nucleic acids may be used to modulate the expression of HBV
CC genes and HBV viral replication. Also disclosed is a method for screening
CC compounds and/or potential therapies directed against HBV, and compounds
CC that modulate the expression and/or replication of HCV. The compounds and
CC methods of the invention are useful for the treatment of degenerative and
CC disease states related to HBV and HCV infection, replication and gene
CC expression such as cirrhosis, liver failure, and hepatocellular
CC carcinoma. The present sequence represents a substrate for one of the HBV
CC ribozyme, inozyme, G-cleaver, zinzyme, DNzyme or amberzyme sequences
CC disclosed in the present invention

PT New zinc finger-containing proteins and nucleic acids, useful in
PT manufacturing a medicament for treating or preventing a disorder
PT associated with decreased or increased expression or activity of MD23,
PT MD24, MD27 or MD212, e.g. cancer.

PS Example 8; SEQ ID NO 4571; 103bp; English.

XX The present invention relates to novel human zinc finger-containing
CC proteins and their coding sequences: MD23, MD24, MD27, MD212. MD23 is
CC encoded at chromosome 7q22.1, MD24 is encoded at chromosome 6p21.3-22.2,
CC MD27 is encoded at chromosome 16p11.2 and MD212 is encoded at chromosome
CC 15q26.1. The MD23, MD24, MD27, and MD212 sequences are useful in therapy,
CC or in manufacturing a medicament for treating or preventing a disorder
CC associated with decreased or increased expression or activity of MD23,
CC MD24, MD27, or MD212, e.g. cancer or developmental disorders. The nucleic
CC acids and proteins are also useful for diagnosing or monitoring a disease
CC caused by altered expression of MD23, MD24, MD27, or MD212. The nucleic
CC acids can also be used as probes to detect and characterize gross
CC alterations in MD23, MD24, MD27, or MD212 genetic locus. The probes are
CC useful in constructing microarrays for measuring gene expression. The
CC proteins are useful as therapeutic agents for gene therapy or as
CC vaccines. The present sequence was used to illustrate the invention.

DR New zinc finger-containing proteins and nucleic acids, useful in

PT manufacturing a medicament for treating or preventing a disorder

PT associated with decreased or increased expression or activity of MD23,

PT MD24, MD27 or MD212, e.g. cancer.

XX Example 8; SEQ ID NO 4572; 103pp; English.

XX The present invention relates to novel human zinc finger-containing
XX proteins and their coding sequences: MD23, MD24, MD27, MD212. MD23 is
XX encoded at chromosome 7q22.1, MD24 is encoded at chromosome 6p21.3-22.2,
XX MD27 is encoded at chromosome 16p11.2 and MD212 is encoded at chromosome
XX 15q26.1. The MD23, MD24, MD27, and MD212 sequences are useful in therapy,
XX or in manufacturing a medicament for treating or preventing a disorder
XX associated with decreased or increased expression or activity of MD23,
XX MD24, MD27, or MD212, e.g. cancer or developmental disorders. The nucleic
XX acids and proteins are also useful for diagnosing or monitoring a disease
XX caused by altered expression of MD23, MD24, MD27, or MD212. The nucleic
XX acids can also be used as probes to detect and characterize gross
XX alterations in MD23, MD24, MD27, or MD212 genetic locus. The probes are
XX useful in constructing microarrays for measuring gene expression. The
XX proteins are useful as therapeutic agents for gene therapy or as
XX vaccines. The present sequence was used to illustrate the invention.

 PT Novel enzymatic nucleic acid molecules which down regulates expression of
 PT a sequence encoding a subunit of nuclear factor kappa B useful for
 PT treating cancer, inflammatory disorders and autoimmune diseases.
 XX
 PS Claim 3; Page 32; 72pp; English.
 XX
 CC The invention describes an enzymatic nucleic acid molecule (I) which down
 CC regulates expression of a sequence encoding a subunit of nuclear factor
 CC kappa B (NFKB), where (I) is an inozyme, zinzyme, G-cleaver or amberyze
 CC configuration. The enzymatic nucleic acid molecule is adapted to treat
 CC cancer and is useful for down-regulating RBL-A activity in a cell, for
 CC treating a patient having a condition associated with the level of RBL-A.
 CC (I) is useful for cleaving RNA comprising a sequence of RBL-A gene, in
 CC the presence of a divalent cation, especially Mg²⁺. The enzymatic and
 CC antisense nucleic acid molecules are useful for treating breast, lung,
 CC prostate, colorectal, brain, oesophageal, stomach, bladder, pancreatic,
 CC cervical, head and neck, ovarian cancer, melanoma, lymphoma, glioma or
 CC multidrug resistant cancer. The method involves use of other drug
 CC therapies such as monoclonal antibodies, RBL-A-specific inhibitors or
 CC chemotherapy including paclitaxel, docetaxel, cisplatin, methotrexate,
 CC cyclophosphamide, doxorubicin, fluorouracil carboplatin, edatrexate,
 CC gemcitabine or radiation therapy. The enzymatic and antisense nucleic
 CC acid molecules are also useful for treating inflammatory disease such as
 CC rheumatoid arthritis, restenosis, asthma, Crohn's disease, diabetes,
 CC obesity, autoimmune disease, lupus, multiple sclerosis, transplant/graft
 CC rejection, gene therapy applications, ischemia/reperfusion injury
 CC (central nervous system (CNS) and myocardial), glomerulonephritis,
 CC sepsis, allergic airway inflammation, inflammatory bowel disease or
 CC infection. This sequence represents the substrate of a novel enzymatic
 CC nucleic acid molecule

New nucleic acid molecule that modulates replication of West Nile Virus
 (WNV), useful for treating a condition related to WNV infection e.g.
 pancreatitis, meningitis, hepatocellular carcinoma or cirrhosis.

Claim 23; SEQ ID NO 4257; 495bp; English.

The invention relates to nucleic acid molecules that modulate replication
 of the West Nile Virus (WNV). The nucleic acid molecules are useful for
 treating a condition related to WNV infection e.g. pancreatitis,
 encephalitis, myocarditis, meningitis, neurologic infection, hepatitis,
 liver failure, hepatocellular carcinoma or cirrhosis. The nucleic acid
 molecule is selected from the group of ribozymes consisting of
 Hammerhead, Inozyme, G-cleaver, DNazyme, Amberzyme and Zinzyme. The
 nucleic acid molecules further comprise at least five ribose residues, at
 least ten 2'-O-methyl modifications, phosphorothioate linkages on at
 least three of the 5' terminal nucleotides and a 3' end modification of a
 3'-3' inverted abasic moiety. Nucleic acid molecules SEQ ID NO 1 to 37080
 are claimed; however, SEQ ID NO 2194-2206 and 17502-17514 are not given
 in the specification. The present sequence is that of a nucleic acid
 molecule of the invention

 PT Enzymatic polynucleotide that down regulates expression of chloride
 PT channel calcium activated gene, useful for treating Chronic obstructive
 PT pulmonary disease (COPD), chronic bronchitis and asthma.
 XX
 PS Claim 4; Page 88; 152pp; English.
 XX
 CC The invention relates to enzymatic nucleic acid molecules that down
 CC regulate expression of chloride channel calcium activated 1 (ClCA1) genes
 CC by cleaving RNA derived from the genes. The nucleic acid sequences are
 CC useful as pharmaceutical agents for treating conditions such as chronic
 CC obstructive pulmonary disease (COPD), chronic bronchitis, asthma, cystic
 CC fibrosis, obstructive bowel syndrome and any other diseases or conditions
 CC that are related to or will respond to the levels of ClCA1 in a cell or
 CC tissue. The sequences are useful for reducing ClCA1 activity in a cell,
 CC hence, are useful for treatment of a patient having a condition
 CC associated with the level of ClCA1, where the invention further comprises
 CC the use of one or more therapies under conditions suitable for the
 CC treatment, for example, oxygen therapy, bronchodilators, corticosteroids,
 CC antibacterials, vaccinations, acetylcysteine and mucokinetic agents. The
 CC nucleic acids of the invention are also used as diagnostic tools to
 CC examine genetic drift and mutations within diseased cells or to detect
 CC the presence of ClCA1 RNA in a cell. This sequence represents an
 CC enzymatic nucleic acid molecule of the invention

PT New isolated nucleic acid encoding an isoform of human pregnancy
associated plasma protein E, for preventing or aborting pregnancy.
XX
PS Example 2; Page 158; 353pp; English.
XX
CC This invention describes a novel isolated nucleic acid that encodes one
of three new isoforms of human pregnancy associated plasma protein E,
hPAP-E. The products of the invention have abortive and contraceptive
activity and can be used for gene therapy or in a vaccine. The nucleic
acid, polypeptide encoded by it, or antibody to the polypeptide can be
used in pharmaceutical compositions or vaccines for preventing or
aborting pregnancy. PAP-E is used in the antenatal diagnosis of
CC dysgenetic pregnancies. The nucleic acids are used as probes to assess
the level of PAP-E isoform mRNA in chorionic villus samples, and the
antibodies can be used to assess the expression levels of PAP-E isoform
proteins in chorionic villus samples, to diagnose dysgenetic pregnancies
CC antenatally. This sequence represents an oligomer used in scanning the
human PAP-E genes described in the disclosure of the invention

PT Novel human SH3 domain (POSH)-like signaling protein 1 polypeptide, POSHL
PT -1, useful for treating disorders associated with decreased expression or
PT activity of human POSHL.
XX
PS Example 2; SEQ ID NO 798; 60pp + Sequence Listing; English.
XX
XX The invention relates to an isolated SH3 domain (POSH)-like signalling
protein 1 (POSHL 1) polypeptide (I), comprising a sequence of 730 amino
CC acids (SI, ABB83999), a sequence having 65% sequence identity to (S1),
CC (S1) having 95% deviations, especially conservative substitutions or a
CC fragment of the sequences comprising at least 8 contiguous amino acids.
CC Human POSHL 1 is a proto-oncogene/oncogene product that functions as an
CC adaptor protein that interacts with Rho family small GTPases as well as
CC downstream components of the signal transduction pathway. (I) is useful
CC for identifying a specific binding partner. (I) and nucleic acids (II)
CC encoding (I) are useful for diagnosing, monitoring disease and treating
CC caused by altered expression of human POSHL1 including diagnosing and
CC treating cancer, they useful in the development of vaccines and (II) is
CC useful in gene therapy. (II) is useful for constructing microarrays which
CC are useful for measuring and for surveying gene expression and creating
CC transgenic non-human animals capable of producing the proteins. The
CC present sequence is that of a scanning oligonucleotide useful in examples
CC of the invention. Note: The present sequence did not form part of the
CC printed specification, but is based on sequence information supplied to
CC Derwent by the European Patent Office

XX	PT	New polypeptide, for raising antibodies that recognize hGDMLP-1 proteins,
PT	or as specific biomolecule capture probes for surface-enhanced laser	
FT	desorption ionization, comprises human myosin-like protein hGDMLP-1.	
PS	Disclosure; SEQ ID NO 2301; 214pp; English.	
XX	CC	The present invention describes a human genome-derived myosin-like
CC	protein 1 (hGDMLP-1). The protein and polynucleotide sequences of hGDMLP-	
CC	1 can be used in gene therapy and vaccine production. The hGDMLP-1	
CC	nucleic acids can be used as probes to detect, characterise and quantify	
CC	hGDMLP-1 nucleic acids in samples, as amplification substrates, to	
CC	provide initial substrates for the recombinant engineering of hGDMLP-1	
CC	protein variants having desired phenotypic improvements, and for	
CC	expressing the proteins. The hGDMLP-1 proteins or polypeptides may be	
CC	used as immunogens to raise antibodies that specifically recognise hGDMLP-	
CC	-1 proteins, as standards in assays used to determine the concentration	
CC	and/or amount specifically of hGDMLP proteins, as specific biomolecule	
CC	capture probes for surface-enhanced laser desorption/ionisation, as	
CC	therapeutic supplement in patients having specific deficiency in hGDMLP-1	
CC	production, and in vaccines or for replacement therapy. The	
CC	polynucleotide sequences encoding hGDMLP-1 may be used for diagnosing a	
CC	disorder associated with the expression of hGDMLP-1, in particular heart	
CC	and skeletal muscle disorders. hGDMLP-1 is localised on chromosome 22.	
CC	The present sequence represents an oligomer used in the screening of the	
CC	hGDMLP-1 sequence in the exemplification of the present invention. N.B.	
CC	The sequence data for this patent did not form part of the printed	
CC	specification, but was obtained in electronic format directly from WIPO	
CC	at ftp.wipo.int/pub/published_pct_sequence

PAP-B	human; pregnancy associated plasma protein E; abortive;

CC molecules (e.g. ribozymes) to modulate gene expression. The invention
CC also methods for their use to down regulate or inhibit the expression of
CC gene encoding protein-tyrosine-phosphatase-1b (PTB-1b), methionine
CC aminopeptidase (MetAP-2), human telomerase (hTERT), protein kinase C
CC alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor
CC receptor-2 (HER2/c-erb2/neu), phospholamban (PLN), presenilin-1 (ps-1),
CC presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic
CC nucleic acid molecules used to inhibit the expression of the said genes
CC include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme,
CC zinzyme, and/or DNAzyme motifs. The methods of the invention are useful
CC for treating cancer, in particular breast cancer, Alzheimer's disease,
CC diabetes, obesity, cardiac diseases e.g. heart disease, age-related
CC diseases, hepatitis B infections, and hepatitis and hepatocellular
CC carcinoma. The enzymatic nucleic acid molecules can also be used as
CC diagnostic tools to examine genetic drift and mutations within diseased
CC cells and to detect the presence of specific RNA in a cell. The present
CC sequence represents a substrate/target sequence for a DNAzyme used in the
CC examples of the present invention. Note: Some SEQ ID Nos are repeated
CC more than once in the specification, but these have different sequences
CC associated with them.

PT Nucleic acid molecule modulating VEGF receptor(s) gene expression or mRNA
PT stability - useful for treating e.g. tumour angiogenesis, psoriasis,
PT rheumatoid arthritis, etc., in a human patient.
XX
PS Claim 4; Page 134; 218pp; English.
XX
CC The present invention describes nucleic acid molecules which modulate the
CC synthesis, expression and/or stability of a mRNA encoding 1 or more
CC receptors of vascular endothelial growth factor (VEGF). A patient
CC (preferably human) having a condition associated with the level of the
CC fms-like tyrosine kinase 1 (flt-1), kinase insert domain containing
CC receptor (KDR) and/or foetal liver kinase 1 (flk-1) (e.g. tumour
CC angiogenesis, ocular diseases, psoriasis and rheumatoid arthritis) can be
CC treated by administering the nucleic acid molecule or the expression
CC vector to the patient. AAX67275 to AAX75752 represent specific examples
CC of nucleic acid molecules from the present invention

PT Enzymatic nucleic acids - which cleave RNA derived from an epidermal
PT growth factor receptor, useful for inhibiting cell proliferation and for
PT treating cancers.
XX
PS Claim 5; Page 73; 109pp; English.
XX
CC The present invention describes enzymatic nucleic acid molecules (NAs)

CC which specifically cleave RNA derived from an epidermal growth factor
CC receptor (EGF-R) gene. AAV97221 to AAV98043 and AAV98979 to AAV99090
CC represent specifically claimed target sequence from human EGF-R. AAV98044
CC to AAV98866 and AAV98867 to V9878 represent hammerhead ribozymes and
CC hairpin ribozymes respectively for human EGF-R. The NAs are useful for
CC cleaving EGF-R RNA in the treatment of a condition associated with EGFR
CC expression levels e.g. to inhibit cell proliferation in the prevention or
CC treatment of cancers. The NAs can also be used as diagnostic tools to
CC examine genetic drift and mutations within diseased cells or to detect

PT Detection of single nucleotide polymorphisms in genomes by preparation
PT and analysis of reduced complexity genomes, useful for genotyping,
PT fingerprinting and determining allele frequency of SNPs.
XX
PS Disclosure; Page 56; 111pp; English.
XX
CC A method has been developed for detecting the presence or absence of a
CC single nucleotide polymorphism (SNP) allele in a genomic sample. The
CC method comprises preparing a reduced complexity genome (RCG) from the
CC genomic sample and analysing the RCG for the presence or absence of a SNP
CC allele. The method can be used to characterise a tumour, to generate a
CC genomic pattern for an individual genome or to generate a genomic
CC classification code for a genome. The method can be used to assess
CC whether a subject is at risk for developing a disease or to identify a
CC set of SNP alleles associated with a disease. The method can also be used
CC to perform linkage analysis. AAA35944 to AAA35947 represent sequences
CC used in the exemplification of the present invention. AAA35948 to
CC AAA36632 represent nucleotide sequences containing SNPs

PT	New oligo:nucleotide primers for HLA-A locus typing - used for typing
PT	tissue for e.g. transplantation(s) and identifying individuals or disease
PT	susceptibility.
XX	
PS	Disclosure; SEQ ID NO 39; 80pp; English.
XX	
CC	The invention relates to a pair of oligonucleotide (ON) primers for
CC	amplifying the exon 1-2 region of the HLA-A locus (human leukocyte
CC	antigen A), where the pair of primers consists of ONs, RAPI007 and DB337
CC	(appearing as ADG76495 and ADG76496) . Also included is a method for
CC	amplifying a region of the HLA-A locus containing the first and second
CC	exons, which consists of carrying out a PCR using the above primers. Also
CC	disclosed are HLA-A genotyping probes for exon 2 and 3 and HLA-A allele
CC	DN/protein sequences. The method is used for typing HLA Class I A locus
CC	nucleic acids for typing tissue for transplantation, determining
CC	individual identity and identifying disease susceptible individuals e.g.
CC	graft-versus-host disease. The method provides a rapid and precise system
CC	for genotyping the alleles of the HLA-A locus, including those that
CC	cannot be distinguished by serological methods. The present sequence is
CC	an HLA-A genotyping probe of the invention. Note: The disclosure states
CC	that the primers amplify exons 2 and 3, not 1 and 2 as stated in the
CC	claims.

PT Genotyping blood cell antigens, by amplifying and detectably labeling DNA by multiplex PCR at region of locus of blood cell antigen containing PT nucleotide polymorphism, determining genotype for blood cell antigens using chimeric primers.

PS Claim 13; SEQ ID NO 82; 80bp; English.

XX The invention relates to genotyping (M1) blood cell antigens, comprising CC subjecting DNA from the individual to a multiplex PCR to amplify (and CC detectably label) a region of the locus of different blood cell antigens CC containing the site of a nucleotide polymorphism (arranged in an array) CC and using the amplified and labeled DNA fragments to determine the CC genotype for each of the blood cell antigens, using a pair of blood cell CC antigen-specific chimeric primers and a detectably labeled universal CC primer. Also included are a kit (I) for genotyping blood cell antigens by CC (M1) comprising a pair of blood cell antigen-specific chimeric primers CC for each blood cell antigen to be genotyped and a detectably labeled CC universal primer, preferably a pair of detectably labeled universal CC primers), a set of blood cell antigen-specific chimeric primer pairs CC useful in a multiplex PCR (comprising at least two, preferably CC substantially all of chimeric primers) and a set of blood cell antigen CC allele-specific oligonucleotide probes useful for genotyping blood cell CC antigens. (M1) enables genotyping of large number of blood cell antigens CC and is a practical, rapid and reliable method for analyzing the CC hybridization results to assign the clinically relevant blood cell CC antigen genotypes. The present sequence is a blood group antigen specific CC probe useful in the method of the invention.

PT New oligonucleotides, useful for tagging restriction fragments for genetic diagnosis.

XX Example 1G; Page 12; 42pp; English.
XX This invention describes a novel oligonucleotide (I) comprising an CC adapter sequence and part of the target sequence of a restriction CC endonuclease, and which has 1-10 selected nucleotides immediately CC adjacent to the 3' end of the target sequence. The products of the CC invention are used to tag restriction fragments which are to be amplified CC by the polymerase chain reaction (PCR). This technique may be used in the CC detection of restriction fragment polymorphisms (RFPs), including length CC polymorphisms. The products can also be used for genetic analysis, such CC as for the forensic typing of humans and the detection of the inheritance CC of determined traits in animals or plants and to monitor several diseases CC at once. The oligonucleotides and kits may also be used to identify CC species, races or varieties of animals or plants. The new adapters, CC oligonucleotides and methods for using them are more sensitive for CC detecting restriction fragment polymorphisms because not only differences CC in the target sites of the restriction endonuclease are detected as with CC prior art methods and oligonucleotides but also differences in the CC adjacent nucleotide sequences within the selective PCR primers. Multiplex CC PCR may only be used to monitor 5-8 different traits simultaneously and CC compromise conditions have to be established to allow all primer pairs to CC yield detectable products. In addition there are strong differences in CC the efficiency of amplification of different fragments and products of CC certain primer pairs are not detectable with multiplex PCR. In contrast, CC using the new techniques, all the primers have a substantial part of CC their nucleotide sequence in common and by selecting Amplified Fragment CC length Polymorphisms, the DNA markers are amplified with equal CC efficiency. AAZ44475-244526 represent primers used to illustrate the CC method of the invention

 PT Tubular member useful for performing sequencing by a synthesis reaction,
 PT comprises an axial bore, one end of which is releasably insertable over a
 PT nozzle of a pipettor to connect the tubular member to the pipettor.
 XX
 PS Example 6; SEQ ID NO 5; 49pp; English.

The present invention relates to a tubular member, such as a pipette tip, for binding nucleic acid molecules for a subsequent biomolecular reaction, to methods for at least partly performing a sequencing -by- synthesis reaction in a tubular member, as well as to an automated system using the tubular member for performing the methods of the invention. Claimed is an automated system for performing sequencing by synthesis reaction using (1), comprising at least one pipettor allowing one or more of (1) to be releasably insertable over the nozzle of the pipettor to connect (1) to the pipettor, and mode for controlling the system; a kit for performing a sequencing reaction, comprising: (1), and reagents for performing primer extension or reagents for performing pyrophosphate detection; or (1) for performing a sequencing -by- synthesis reaction, a pipette tip adapted for purifying the template nucleic acid sample to be used in a subsequent sequencing -by- synthesis reaction, and reagents for performing primer extension or reagents for performing pyrophosphate detection; and a computer program (CP) for causing a computerized apparatus to determine the identity of at least one nucleotide in a nucleic acid molecule. An enzyme mix, comprising nucleic acid polymerase, endonuclease and luciferase, substrate, comprising APS and luciferin, and a dNTP is aspirated into (1) under conditions allowing extension of an oligonucleotide primer if the chosen dNTP is complementary to the template in the position directly adjacent to the 3'-end of the primer.

CC Detection involves a light detection device, such as a charge-coupled device (CCD) camera, phototransistor or photomultiplier tube. The present CC sequence is primer B021FPB for PCR of region around the SNP rs6276 in CC monoamine oxidase gene.

 PT Genotyping blood cell antigens, by amplifying and detectably labelling DNA
 PT by multiplex PCR at region of locus of blood cell antigen containing
 PT nucleotide polymorphism, determining genotype for blood cell antigens
 PT using chimeric primers.
 XX
 PS Chaim 13; SEQ ID NO 89; 80pp; English.

The invention relates to genotyping (M1) blood cell antigens, comprising CC subcloning DNA from the individual to a multiplex PCR to amplify (and CC detectably label) a region of the locus of different blood cell antigens CC containing the site of a nucleotide polymorphism (arranged in an array) CC and using the amplified and labeled DNA fragments to determine the CC genotype for each of the blood cell antigens, using a pair of blood cell CC antigen-specific chimeric primers and a detectably labeled universal CC primer. Also included are a kit (1) for genotyping blood cell antigens by CC (M1) (comprising a pair of blood cell antigen-specific chimeric primers CC for each blood cell antigen to be genotyped and a detectably labeled CC universal primer, preferably a pair of detectably labeled universal CC primers), a set of blood cell antigen-specific chimeric primer pairs CC useful in a multiplex PCR (comprising at least two, preferably CC substantially all of chimeric primers) and a set of blood cell antigen CC allele-specific oligonucleotide probes useful for genotyping blood cell CC antigens. (M1) enables genotyping of large number of blood cell antigens CC and is a practical, rapid and reliable method for analyzing the CC hybridization results to assign the clinically relevant blood cell CC antigen genotypes. The present sequence is a blood group antigen specific CC probe useful in the method of the invention.

 DR
 XX Identifying a candidate polymorphic repeat within a coding sequence, for
 PT understanding or treating genetic disease, comprises detecting tandem
 PT repeats in a target coding sequence and scoring the repeats for
 PT polymorphic probability.
 XX
 PS Example; Col 1089; 588pp; English.
 XX
 CC The invention discloses a method for identifying a candidate polymorphic
 CC repeat within a coding sequence (expressed sequence tag, EST), which
 CC comprises detecting tandem repeats in a target coding sequence, scoring
 CC the repeats for polymorphic probability and generating a dataset
 CC correlating the repeats with polymorphic probability to identify a
 CC candidate polymorphic repeat. The computational methods (polymorphic
 CC marker prediction of ubiquitous simple sequences, POMPOS, and Rep-X) are
 CC useful for identifying and detecting candidate polymorphic repeats in
 CC human genes, which can be used to understand, treat or eliminate genetic
 CC diseases, predispositions or adverse drug-treatment reactions. Examples
 CC of diseases linked to nucleotide repeats are Machado-Joseph, Haw River
 CC syndrome, Huntington's disease, fragile-X syndrome, Friedrich's ataxia,
 CC myotonic dystrophy, hyperandrogenaemia, spinal and bulbar atrophy and
 CC spinocerebellar ataxia. The sequences presented in ABX79676-ABX80022 are
 CC the polymorphic repeats identified for a search of human ESTs

 XX Direct comparison of numerical gene expression values between samples of
 PT genes comprises using multiplex standardized reverse transcription-
 PT polymerase chain reaction.

XX
 PS Example 1; SEQ ID NO 43; 59pp; English.
 XX
 CC The present invention relates to a method for the direct comparison of
 CC numerical gene expression values between samples of genes. The method
 CC comprises amplifying cDNA in the presence of a competitive template
 CC mixture and primer pairs for several genes and then amplifying aliquots
 CC of the PCR products using a primer pair specific for each gene. The
 CC method of amplification is by multiplex standardised reverse
 CC transcriptase-polymerase chain reaction (Start-PCR). High density
 CC oligonucleotide or cDNA arrays are used to measure PCR products following
 CC quantitative Start-PCR. The method is useful for the assessment of gene
 CC expression in small biological samples such as fine needle aspirate
 CC biopsies, and laser captured microdissected materials. The method allows
 CC for the standardised measurement of hundreds of genes from the same
 CC sample, which in prior art, could only be assessed for one gene. The
 CC present sequence represents a multiplex Start-PCR primer which can be
 CC used in the method of the present invention.

PT Enzymatic nucleic acid molecules able to cleave separate RNA molecules
PT are used for treating cancer, Alzheimer's disease, hepatitis, diabetes,
PT obesity and heart disease.

PS Example 6; Page 544; 717pp; English.

The present invention relates to the use of enzymatic nucleic acid molecules (e.g. ribozymes) to modulate gene expression. The invention also methods for their use to down regulate or inhibit the expression of genes encoding protein-tyrosine-phosphatase-1b (PTB-1b), methionine aminopeptidase (MePAP-2), human telomerase (hTERT), protein kinase C alpha (PKC alpha), c-erbB-sectase (BACs), human epidermal growth factor receptor-2 (HERA/erbB-neu), phospholamban (PLN), prelinin-1 (ps-1) prelinin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic nucleic acid molecules used to inhibit the expression of the said genes include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme, zinczyme, and/or DNAzyme motifs. The methods of the invention are useful for treating cancer, in particular breast cancer, Alzheimer's disease, diabetes, obesity, cardiac diseases e.g. heart disease, age-related diseases, hepatitis B infections, and hepatitis and hepatocellular carcinomas. The enzymatic nucleic acid molecules can also be used as diagnostic tools to examine genetic drift and mutations within diseased cells and to detect the presence of specific RNA in a cell. The present sequence represents a substrate for a Ribozyme used in the examples of the present invention. Note: Some SEQ ID Nos are repeated more than once in the specification, but these have different sequences associated with them.

PS Example 6; Page 553; 717pp; English.

The present invention relates to the use of enzymatic nucleic acid molecules (e.g. ribozymes) to modulate gene expression. The invention also methods for their use to down regulate or inhibit the expression of genes encoding protein-tyrosine-phosphatase-1b (PTB-1b), methionine aminopeptidase (MetAP-2), human telomerase (hTERT), protein kinase C α (PKC α), beta-secretase (BACE), human epidermal growth factor receptor-2 (HER2/c-erbB2/neu), phospholamban (PLN), presenilin-1 (ps-1), presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic nucleic acid molecules used to inhibit the expression of the said genes include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme, zinczyme, and/or DNAzyme motifs. The methods of the invention are useful for treating cancer, in particular breast cancer, Alzheimer's disease, diabetes, obesity, cardiac diseases and e.g. heart disease, age-related diseases, hepatitis B infections, and hepatitis and hepatocellular carcinoma. The enzymatic nucleic acid molecules can also be used as diagnostic tools to examine genetic drift and mutations within diseased cells and to detect the presence of specific RNA in a cell. The present sequence represents a substrate for a DNAzyme used in the examples of the present invention. Note: Some SEQ ID Nos are repeated more than once in the specification, but these have different sequences associated with them.

 XX XX Example 6; Page 573; 717pp; English.
 PS The present invention relates to the use of enzymatic nucleic acid
 CC molecules (e.g. ribozymes) to modulate gene expression. The invention of
 CC also methods for their use to down regulate or inhibit the expression of
 CC genes encoding protein-tyrosine-phosphatase-1b (PTB-1b), methionine
 CC alpha (PKC alpha), beta-secretase (BACE), human epidermal growth factor
 CC receptor-2 (HER2/c-erb2/neu), phospholamban (PLN), presenilin-1 (ps-1),
 CC presenilin-2 (ps-2), and hepatitis B virus (HBV) proteins. The enzymatic
 CC nucleic acid molecules used to inhibit the expression of the said genes
 CC include hammerhead (HH), hairpin, NCH (inozyme), G-cleaver, amberzyme,
 CC zinyyme, and/or DNAzyme motifs. The methods of the invention are useful
 CC for treating cancer, in particular breast cancer, Alzheimer's disease,
 CC diabetes, obesity, cardiac diseases e.g. heart disease, age-related
 CC diseases, hepatitis B infections, and hepatitis and hepatocellular
 CC carcinoma. The enzymatic nucleic acid molecules can also be used as
 CC diagnostic tools to examine genetic drift and mutations within diseased
 CC cells and to detect the presence of specific RNA in a cell. The present
 CC sequence represents a substrate for a ribozyme used in the examples of
 CC the present invention. Note: Some SEQ ID Nos are repeated more than once
 CC in the specification, but these have different sequences associated with

CC gene cluster ORFs are useful for chemically modifying a molecule in a
CC host cell. The host cell is a bacterium or eukaryotic cell, including a
CC mammalian, yeast, plant, fungal, or insect cell. The molecule is an
CC endogenous metabolite produced by the host cell or exogenously supplied
CC metabolite, or an amino acid, and the polypeptide is a peptide synthetase
CC or amino transferase. The polypeptides encoded by the lmm gene cluster
CC are useful for converting an apo-carrier protein to a holo-carrier
CC protein. lmm shows potent antitumour activity in tumour models in vivo.
CC The lmm gene cluster modules and/or catalytic domains are useful for
CC making various peptide and/or polypeptide, and/or hybrid
CC polypeptide/polypeptide metabolites. The proteins encoded by the ORFs are
CC useful alone, or in combination with other active domains to modify
CC various target substrates. The lmm gene cluster is useful to upregulate
CC endogenous lmm production to permit lmm production in cells and/or to
CC make various modified lmm. lmm, its analogue, or other polypeptide,
CC peptide or hybrid polypeptide/peptide metabolites are useful as
CC therapeutic agents, to treat a number of disorders, depending upon the
CC type of metabolites. ABX34290-ABX34431 represent PCR primers used to
CC amplify individual ORFs of the S. atrocolivaceus leinamycin biosynthesis

PT Detecting retroviral DNA using labelled oligo:nucleotide(s) - which bind
PT to the primer binding site of a retroviral genome, useful as sequence
PT tag.
XX
PS Claim 2; Page 27; 39pp; English.
XX
XX The human genome is thought to contain around 1300 transfer RNA (tRNA)
CC genes and pseudogenes encoding 60-90 tRNAs. Of these, 20 have been
CC sequenced and 11 tRNA sequences have been shown to act as primers for
CC synthesising the (-)-strand of retroviruses by reverse transcriptase.
CC Sequences AAT92025-48 are sense primers identical to primer binding site
CC (PBS) sequences found in retroviral sequences, which are complementary to
CC the last 18 nucleotides of tRNA gene sequences. This sequence is derived
CC from known exogenous or endogenous retroviral sequences. They may also be
CC used to detect novel retroviruses or endogenous retroviral sequences
CC found in the human genomes. Endogenous retroviral sequences may serve as
CC useful tags in animal evolutionary studies and breeding programmes and,
CC potentially, in forensic sciences

 DR An antisense compound which inhibits expression of human MEK1, useful for
 PT treating cancer.
 PS Claim 3; Page 76; 101pp; English.
 CC MEK1 is part of the MAPK/ERK subgroup of the MAP kinases. It is thought
 CC that MEK1 is responsible for the proliferative or mitogenic response of
 CC tissues. Antisense oligonucleotides targeted to MEK1 may be used to
 CC inhibit expression of the gene. MEK1 inhibition may be useful for the
 CC treatment of conditions associated with the expression of MEK1, for
 CC example a hyperproliferative condition such as cancer. The present
 CC sequence is antisense oligonucleotide ISIS# 25011 that was targeted to
 CC the coding region of MEK1 mRNA

 CC Antisense inhibition of human G-alpha-12 expression.
 PT
 XX Example 15; Col 38; 36pp; English.
 PS
 CC This is a human G-alpha-12 antisense nucleotide sequence. G-alpha-12 is a
 CC member of the G12/13 subfamily of G-proteins. The primary function of G-

CC alpha-12 is in cell differentiation and growth. The invention relates to
 CC antisense compounds which are 8-30 nucleotides long (see AAZ57686-
 CC 257746). The antisense molecules are targeted to the human G-alpha-12
 CC nucleic acid molecule, and inhibit the expression of G-alpha-12. The
 CC molecules preferably have a modified internucleotide linkage, and at
 CC least one modified sugar moiety. The compounds target different regions
 CC of the human G-alpha-12 RNA. The expression of human G-alpha 12 is
 CC inhibited by contacting human cells or tissues in vitro with the
 CC antisense molecules. The oligonucleotides are used in modulating the
 CC function of nucleic acid molecules encoding G-alpha-12, ultimately
 CC modulating the amount of G-alpha-12 produced. The antisense compounds can
 CC be utilized for diagnostics, therapeutics, prophylaxis and as research
 CC agents and kits. They may be useful in the treatment of cancer, and
 CC metastatic growth

PT Novel polymorphic variant of reference sequence for human cholinergic
PT receptor, muscarinic 3 gene, useful for diagnostic and therapeutic
PT purposes.
XX
PS Claim 15; Page 19; 54pp; English.
XX
CC The patent relates to polymorphic variants of human cholinergic receptor,
CC muscarinic 3 (CHRM3) gene. The polymorphic variant comprises at least one
CC single nucleotide polymorphism selected from cytosine at P81, adenine at
CC P82 or P83, and cytosine at P84. The invention also relates to a method
CC for genotyping and haplotyping the CHRM3 gene for identification of
CC variants. The polymorphic variant is useful for therapeutic purposes, for
CC studying the expression and biological function of CHRM3, as well as for
CC developing drugs targeting the CHRM3 protein. The variant is also useful
CC in diagnostics and forensic applications. The recombinant nonhuman
CC organism transfected with the polymorphic variant is useful for studying
CC expression of CHRM3 isogenes in vivo, for in vivo screening and testing
CC of drugs targeted against CHRM3 protein, and for testing the efficacy of
CC therapeutic agents and compounds for Alzheimer's disease, Sjogren's
CC syndrome, disorders associated with smooth muscle contractility and
CC sudden infant death syndrome. The CHRM3 protein variant is useful in drug
CC screening assays and its antibodies are useful in immunoassays to detect
CC CHRM3 protein variants in biological samples. The present sequence is an
CC allele-specific oligonucleotide (ASO) primer used for detecting human
CC CHRM3 gene polymorphism

PT New nucleic acids that interact, and optionally cleave, target sequences,
PT used to treat cancer.
XX
PS Claim 77; Page 64; 148pp; English.
XX
CC The present invention describes nucleic acids (A) that interact stably
CC with a target sequence and contain at least one phosphoro(di)thioate
CC link, having endonuclease activity. (A), and more generally any catalytic
CC nucleic acid (A') that modulates expression of the oestrogen receptor
CC gene, are used to treat cancer (particularly of breast or endometrium),
CC in vivo or by transforming cells ex vivo and implanting treated cells, or
CC for other conditions associated with levels of oestrogen receptor.
CC Because of the high selectivity for targeted RNA, (A) can also be used to
CC correlate inhibition of gene expression with alterations in phenotype,
CC particularly for identification of therapeutic targets, and as research
CC reagents (for RNA, in the same way that restriction endonucleases are
CC used with DNA). The combination of modifications in (A) improves
CC resistance to nucleases, binding affinity and/or activity. AAA23503 to
CC AAA24748 to AAA25992 represent oestrogen receptor hammerhead ribozyme sequences, and
CC AAA24748 to AAA25992 represent their corresponding target sequences.
CC AAA25993 to AAA26105 represent oestrogen receptor hairpin ribozyme
CC sequences, and AAA26107 to AAA26218 represent their corresponding target
CC sequences. AAA26219 to AAA26271 represent other ribozyme sequences and
CC antisense oligonucleotides used in the exemplification of the present
CC invention

 XX
 XS Claim 15; Page 19; 54pp; English.
 XX
 PS The patent relates to polymorphic variants of human cholinergic receptor,
 CC muscarinic 3 (CHRM3) gene. The polymorphic variant comprises at least one
 CC single nucleotide polymorphism selected from cytosine at PS1, adenine at
 CC PS2 or PS3, and cytosine at PS4. The invention also relates to a method
 CC for genotyping and haplotyping the CHRM3 gene for identification of
 CC variants. The polymorphic variant is useful for therapeutic purposes, for
 CC studying the expression and biological function of CHRM3, as well as for
 CC developing drugs targeting the CHRM3 protein. The variant is also useful
 CC in diagnostics and forensic applications. The recombinant nonhuman
 CC organism transfected with the polymorphic variant is useful for studying
 CC expression of CHRM3 isogenes in vivo, for in vivo screening and testing
 CC of drugs targeted against CHRM3 protein, and for testing the efficacy of
 CC therapeutic agents and compounds for Alzheimer's disease, Sjogren's
 CC syndrome, disorders associated with smooth muscle contractility and
 CC sudden infant death syndrome. The CHRM3 protein variant is useful in drug
 CC screening assays and its antibodies are useful in immunoassays to detect
 CC CHRM3 protein variants in biological samples. The present sequence is an
 CC allele-specific oligonucleotide (ASO) probe used for detecting human
 CC CHRM3 gene polymorphism

PS using chimeric primers.
XX
PS Claim 13; SEQ ID NO 88; 80bp; English.
XX
XX The invention relates to genotyping (M1) blood cell antigens, comprising
CC subjecting DNA from the individual to a multiplex PCR to amplify (and
CC detectably label) a region of the locus of different blood cell antigens
CC containing the site of a nucleotide polymorphism (arranged in an array)
CC and using the amplified and labeled DNA fragments to determine the
CC genotype for each of the blood cell antigens, using a pair of blood cell
CC antigen-specific chimeric primers and a detectably labeled universal
CC primer. Also included are a kit (I) for genotyping blood cell antigens by
CC (M1) (comprising a pair of blood cell antigen-specific chimeric primers
CC for each blood cell antigen to be genotyped and a detectably labeled
CC universal primer, preferably a pair of detectably labeled universal
CC primers), a set of blood cell antigen-specific chimeric primer pairs
CC useful in a multiplex PCR (comprising at least two, preferably
CC substantially all of chimeric primers) and a set of blood cell antigen
CC allele-specific oligonucleotide probes useful for genotyping blood cell
CC antigens. (M1) enables genotyping of large number of blood cell antigens
CC and is a practical, rapid and reliable method for analyzing the
CC hybridization results to assign the clinically relevant blood cell
CC antigen genotypes. The present sequence is a blood group antigen specific
CC probe useful in the method of the invention.

 PT Enhancing hematopoiesis-supporting ability of immortalized human bone-
 PT marrow stroma cells comprising transferring Indian hedgehog gene via
 PT retrovirus vector, for use in regeneration medicine.
 XX
 PS Disclosure; Page 10; 42pp; Japanese.
 XX
 CC The invention relates to a method for the proliferation of hematopoietic
 CC cells, which comprises expressing a polypeptide with use of a gene that
 CC encodes a polypeptide with the proliferative activity of hematopoietic
 CC cells selected from e.g. a polypeptide of sequence (I) with 202 amino
 CC acids ABA04765, a polypeptide containing at least 28-202 amino acid
 CC residues in the sequence (I) and a polypeptide derived from the sequence
 CC (I). Also included are: a similar method for the proliferation of
 CC hematopoietic cells by expressing a gene that contains a DNA chosen from
 CC (a) a DNA with a sequence of (II) of 609 base pairs ABA04766, (b) a DNA
 CC containing at least 81-606 base pairs in the sequence (II) and (c) a DNA
 CC hybridizable with any of the DNAs in (a) and (b) under stringent
 CC conditions and encoding a protein with Indian hedgehog activity; bone-
 CC marrow stroma cells transferred with the gene that encodes such
 CC polypeptide with proliferative activity on hematopoietic cells; a method
 CC for proliferating hematopoietic cells by co-culturing such bone-marrow
 CC stroma cells with hematopoietic cells; an expression vector for enhancing
 CC the hematopoiesis comprising a gene that encodes the already-specified
 CC polypeptide; and enhancement agents for hematopoietic cells containing
 CC the already-specified polypeptides as active ingredient. The bone-marrow
 CC stroma cells are particularly those previously with hTERT (human
 CC telomerase catalytic domain) gene transferred, and also with a gene that
 CC encodes a polypeptide with proliferative activity on hematopoietic cells
 CC transferred by using a retrovirus vector. The produced bone-marrow stroma
 CC cells are for use in regeneration medicine, e.g. bone-marrow transplant
 CC and tissue regeneration particularly of blood vessels, heart muscle and
 CC liver. With this method, the hematopoiesis-supporting ability of
 CC immortalized human bone-marrow stroma cells is greatly enhanced, and
 CC hematopoietic stroma cells are strongly amplified when the 1hh (Indian
 CC hedgehog) stroma cells are used. The hTERT stroma cell line (1hh stroma
 CC cell line) was established with use of a PRX-ZRS-hGFP vector for
 CC transferring an Indian hedgehog gene before overexpressing such gene. The
 CC present sequence represents a PCR primer used to amplify the Indian
 CC hedgehog (1hh) gene.

XX New oligonucleotides, useful for rapid detection of beer-spoilage
PT bacteria by in situ hybridization, are specific for type, genus or
PS species.
XX
XX Claim 1; SEQ ID NO 187; 88pp; German.
PS
XX This invention describes novel oligonucleotides used in a method for
CC detecting beer-spoilage bacteria in a sample. The bacteria detected
CC include lactic acid bacteria of the genera Lactobacillus or Pedococcus,
CC especially the species L. coryniformis, L. perolens, L. buchneri, L.
CC plantarum, L. fructivorans, L. lindneri, L. casei, L. brevis or P.
CC damnosus or Gram-negative bacteria of the genera Pectinatus and M.
CC Megaspilaera, specifically P. trisingensis, P. cerevisiophilus and M.
CC cerevisiae. The oligonucleotides of the invention provide rapid detection
CC of spoilage bacteria (typically within 48 hours, compared with 7-12 days
CC for conventional culture methods), can detect all relevant bacteria in
CC parallel, can differentiate between species of the same genus, and are
CC easy to use. ADE14806-ADE15247 represent the oligonucleotides used in the
CC method of the invention.

PS
XX
XX The present invention relates to a method for detecting Hepatitis B virus
CC (HBV) covalently closed circular (ccc) DNA. The method comprises
CC obtaining a sample of liver cells infected with HBV cccDNA virus from a
CC patient, preparing at least one primer for applying to at least one end
CC of the HBV cccDNA virus, amplifying the HBV cccDNA virus by PCR using at
CC least one primer, preparing at least one probe for applying to the HBV
CC cccDNA virus genome, where the probe comprises a dye and a dye quencher,
CC and conducting a second PCR to bind at least one primer to at least one
CC probe so that the dye and the dye quencher in the probe are separated
CC allowing the HBV cccDNA virus to be detected through the dye. Also
CC disclosed is a kit for the detection of HBV cccDNA in a patient. The
CC method of the invention is useful for detecting cccDNA of HBV in the form
CC of a HBV cccDNA genome from an infected liver cell and for providing
CC guidance to the patient undergoing long term anti-HBV therapy. The method
CC is efficient, rapid, economical and highly sensitive in monitoring HBV
CC cccDNA in infected human liver biopsies. The method is specific for HBV
CC cccDNA as viral genomic DNA is not amplified. The persistence of HBV
CC cccDNA is believed to be the major reason for relapse after HBV antiviral
CC therapy, but prior art methods are poor at quantifying cccDNA in infected
CC liver cells. The present sequence represents a PCR primer used in the
CC method of the invention.

 PT New chimeric bcl-2/IgH antisense transcript of t(14; 18) translocated
 PT cells - used to develop oligodeoxynucleotides for the diagnosis and
 PT treatment of tumours associated with the translocation.
 XX
 PS Claim 9; Page 15; 32pp; English.
 XX
 CC AAT35435-T35438 are small oligodeoxynucleotides (ODNs) derived from a
 CC chimeric bcl-2/IgH (immunoglobulin heavy chain) gene present in the t(14;
 CC 18) chromosomally translocated non-Hodgkin's lymphoma cell line DOHH2.
 CC The ODNs are from either the J6 or J6/E region of the IgH sequence, they
 CC are used for the design of antisense transcripts which can inhibit the
 CC production of bcl-2 protein in t(14; 18) translocated cells and induce
 CC cell death. The antisense transcripts can be used for the diagnosis and
 CC treatment of t(14; 18)-associated tumours and for monitoring treatment of
 CC a pathology associated with a t(14; 18) translocation. (Updated on 25-MAR

 PT Determining residual disease comprises using a fluorogenic probe specific
 PT to a malignancy-specific nucleic acid sequence.
 XX
 PS Disclosure; Page 15; 49pp; English.
 XX
 CC This invention describes a method for determining minimal residual
 CC disease during and after cancer treatment. The method involves amplifying
 CC nucleic acid molecules using at least one primer reactive with a common
 CC gene segment, and identifying malignancy-specific nucleic acid sequences
 CC by hybridizing with a fluorogenic probe specific to the malignancy-
 CC specific nucleic acid sequences. The method is not restricted to a set of
 CC patients as in immunological marker analysis, and the new technique
 CC allows quantitative detection of frequencies of malignant cells, unlike
 CC current PCR methods, which are also time-consuming, inaccurate and
 CC difficult to standardize. The new method takes 3 hours, compared to 5
 CC days for conventional techniques, and has equal sensitivity. This
 CC sequence represents a primer used in the method of the invention

 PT infection.
 PS Example 1; Page 158; 387pp; English.
 CC The present invention relates to nucleic acid molecules which modulate
 CC the synthesis, expression and/or stability of Hepatitis C virus (HCV) or
 CC Hepatitis B virus (HBV) RNA. The nucleic acid molecules include antisense
 CC and enzymatic nucleic acids such as hammerhead ribozymes, DNazymes,
 CC inozymes, zinzymes, amberzymes, and G-cleaver ribozymes. Also disclosed
 CC are nucleic acid decoy molecules and aptamers that bind to HBV reverse
 CC transcriptase and/or HBV reverse transcriptase primer sequences, as well
 CC as oligonucleotides that specifically bind the Enhancer 1 region of HBV
 CC DNA. The nucleic acids may be used to modulate the expression of HBV
 CC genes and HBV viral replication. Also disclosed is a method for screening
 CC compounds and/or potential therapies directed against HBV, and compounds
 CC that modulate the expression and/or replication of HCV. The compounds and
 CC methods of the invention are useful for the treatment of degenerative and
 CC disease states related to HBV and HCV infection, replication and gene
 CC expression such as cirrhosis, liver failure, and hepatocellular
 CC carcinoma. The present sequence represents a substrate for one of the HBV
 CC ribozyme, inozyme, G-cleaver, zinzyme, DNazyme or amberzyme sequences

XX
XX
XX Example 3; SEQ ID NO 516; 266pp; English.
XX
XX The invention relates to a novel chemically synthesized double stranded short interfering nucleic acid molecule that directs cleavage of a signal transducer and activator of transcription 3 (STAT3) RNA by RNA interference. The invention further includes a composition comprising the short interfering nucleic acid in a carrier or diluent. The short interfering nucleic acid has cytosaratic, antipsoriatic, dermatological, antiinflammatory, and gastrointestinal-Gen. activities. The short interfering nucleic acid or its composition is useful for treating, preventing, inhibiting, or reducing cancer, proliferative, and/or

PT arthritis (RA), useful in identification of individuals at risk of
PT developing RA or other autoimmune disease, and in development of
PT therapeutic agents.

PS Claim 21; SEQ ID NO 49888; 141pp; English.

CC The invention relates to an isolated nucleic acid molecule comprising at
CC least 8 contiguous nucleotides where one of the nucleotides is a single
CC nucleotide polymorphism (SNP) selected from any one of the nucleotide
CC sequences of SEQ ID NOS 1-669 and 1339-49582, or their complements. The
CC SNPs are useful as targets for the design of diagnostic reagents and the
CC development of therapeutic agents, as well as for disease association and
CC linkage analysis. In particular, the SNPs are useful for identifying an
CC individual who is at an increased or decreased risk for developing an
CC autoimmune disease such as rheumatoid arthritis, type 1 diabetes,
CC multiple sclerosis, systemic lupus erythematosus, inflammatory bowel
CC diseases, psoriasis, thyroiditis, celiac disease, pernicious anaemia,
CC asthma, vitiligo, glomerulonephritis, Graves' disease, myocarditis,
CC Sjogren disease, or primary systemic vasculitis. Methods associated with
CC the SNPs are useful for early detection of the disease, for providing
CC clinically important information for the prevention and/or treatment of
CC the autoimmune diseases particularly rheumatoid arthritis, and for
CC screening and selecting therapeutic agents. The SNPs are useful for human
CC identification and applications. The genes containing the SNPs are useful for
CC treating the diseases defined above. The nucleic acid molecules are
CC useful as hybridization probes for genotyping SNPs in messenger RNA,
CC cDNA, genomic DNA, and genomic clones. The nucleic acid molecules are
CC useful for constructing host cells expressing a part or all of the
CC nucleic acid molecules and variant peptides, for constructing transgenic
CC animals, for assaying or screening drugs that modulate nucleic acid
CC expression, or for gene therapy in patients whose cells have aberrant
CC gene expression. This sequence corresponds to a PCR primer which
CC hybridises to the nucleic acids of the invention to amplify the SNP
CC containing region. (Note: SEQ ID NOS 1-49582 are claimed and stated as
CC being provided in the printed specification, however these sequences are not
CC provided in the printed specification).

XX Preparing a DNA molecule by incorporating a nucleic acid molecule into at

PT least some of the DNA molecules digested with a methylation-sensitive

PT restriction enzyme and amplifying the first modified DNA molecules.

XX Disclosure; SEQ ID NO 72; 222pp; English.

CC The invention relates to a method for preparing a DNA molecule. The
CC method comprises: (a) providing a DNA molecule; (b) digesting the DNA
CC molecule with a methylation-sensitive restriction enzyme and optionally,
CC an additional nuclease, to provide digested DNA molecules; (c)
CC incorporating a nucleic acid molecule into at least some of the digested
CC DNA molecules to provide first modified DNA molecules by (1)
CC incorporating at least one primer from primers, the primers comprising a
CC 5' constant sequence and a 3' variable sequence that is substantially non-
CC self-complementary and substantially non-complementary to other primers;
CC or (2) incorporating an oligonucleotide comprising an inverted repeat and
CC a loop, under conditions where the oligonucleotide becomes blunt-end
CC ligated to one strand of the molecule, thereby producing an
CC oligonucleotide-linked molecule comprising a nick having a 3' hydroxyl
CC group, where there is polymerization from the 3' hydroxyl group of at
CC least part of the oligonucleotide-linked molecule; and (d) amplifying one
CC or more of the first modified DNA molecules to provide amplified first
CC modified DNA molecules. The method is useful in preparing a DNA molecule
CC for diagnosing or prognosing cancer. The method of the invention reduces
CC the quantity of DNA required for methylation analysis from non-invasive
CC clinical sources, e.g., serum, plasma or urine, since a majority of the
CC DNA may remain in an unamplified form. The present sequence represents a
CC human marker used for methylation analysis by quantitative real-time PCR,
CC which is used in an example from the present invention.

PT	New small interfering polynucleotide that modulates protein tyrosine
PT	phosphatase (PTP)1B polypeptide signal transduction, useful for treating
PT	disorders associated with altered PTP1B signal transduction, e.g.
XX	diabetes or cancer.
PS	
XX	Example 3; SEQ ID NO 126; 234pp: English.
XX	
CC	The invention relates to a novel isolated small interfering RNA (siRNA)
CC	polynucleotide, comprising at least one nucleotide sequence from any of
CC	the 20 fully defined sequences given in the specification. The invention
CC	further relates to: a pharmaceutical composition comprising a new siRNA
CC	polynucleotide and a physiological carrier; a recombinant nucleic acid
CC	construct, comprising a polynucleotide that is capable of directing
CC	transcription of an siRNA; a host cell transformed or transfected with
CC	the above recombinant nucleic acid construct; a method for interfering
CC	with expression of a protein tyrosine phosphatase (PTP)1B polypeptide, or
CC	its variant; a method for identifying a component of a PTP1B signal
CC	transduction pathway; a method for modulating an insulin receptor protein
CC	phosphorylation state in a cell; a method for altering a Jak2 protein
CC	phosphorylation state in a cell; and a method for treating a Jak2-
CC	associated disorder. The siRNA has the following activities:
CC	anti-diabetic, anorectic, antiinflammatory, neuroprotective, cytostatic,
CC	immunosuppressive, and antimicrobial. The novel siRNA polynucleotides can
CC	be used in gene therapy to treat disorders. The composition and methods
CC	are useful in treating disorders associated with PTP1B-mediated signal
CC	transduction, such as diabetes, obesity, hyperglycaemia-induced
CC	apoptosis, inflammation, neurodegenerative disorders, cancer, autoimmune
CC	diseases or infection. This polynucleotide sequence represents an siRNA
CC	used for modulating the signal transduction of a protein tyrosine
CC	phosphatase of the invention.

XX	
PT	New short interfering nucleic acid molecule that directs cleavage of a
XX	cholinergic receptor muscarinic 3 RNA, useful for treating or preventing
PT	respiratory and pulmonary diseases, e.g. chronic obstructive pulmonary
XX	disease.
PS	
XX	Claim 33; SEQ ID NO 275; 184pp; English.
CC	
XX	The invention relates to a chemically synthesized double stranded short
CC	interfering nucleic acid (siRNA) molecule that directs cleavage of a
CC	cholinergic receptor muscarinic 3 (CHRM3) RNA via RNA interference
CC	(RNAi). The siRNA molecule, compounds, compositions, and methods are
CC	useful for treating or preventing respiratory and pulmonary diseases,
CC	diseases, and/or conditions, including chronic obstructive pulmonary
CC	disease, asthma, allergic rhinitis, sinusitis, inflammation, allergies,
CC	cystic fibrosis, Alzheimer's disease, and/or urinary incontinence. The
CC	present sequence represents a cholinergic receptor muscarinic 3 siRNA.

NUMBER OF SEQ ID NOS: 324
SOFTWARE: PatentIn version 3.3
SEQ ID NO 260
LENGTH: 21
TYPE: RNA
ORGANISM: Artificial Sequence
FEATURE:
OTHER INFORMATION: Description of Artificial Sequence: siNA sense region
FEATURE:
NAME/KEY: misc_feature
LOCATION: (1)..(2)
OTHER INFORMATION: 2'-O-methyl
FEATURE:
NAME/KEY: misc_feature
LOCATION: (1)..(11)
OTHER INFORMATION: 5'-3 attached terminal deoxyabasic moiety
FEATURE:
NAME/KEY: misc_feature
LOCATION: (3)..(3)
OTHER INFORMATION: 2'-deoxy-2'-fluoro
FEATURE:
NAME/KEY: misc_feature
LOCATION: (4)..(5)
OTHER INFORMATION: 2'-O-methyl
FEATURE:
NAME/KEY: misc_feature
LOCATION: (6)..(6)
OTHER INFORMATION: 2'-deoxy-2'-fluoro
FEATURE:
NAME/KEY: misc_feature
LOCATION: (7)..(7)
OTHER INFORMATION: 2'-O-methyl
FEATURE:
NAME/KEY: misc_feature
LOCATION: (8)..(9)
OTHER INFORMATION: 2'-deoxy-2'-fluoro
FEATURE:
NAME/KEY: misc_feature
LOCATION: (10)..(11)
OTHER INFORMATION: 2'-O-methyl
FEATURE:
NAME/KEY: misc_feature
LOCATION: (12)..(12)
OTHER INFORMATION: 2'-deoxy-2'-fluoro
FEATURE:
NAME/KEY: misc_feature
LOCATION: (13)..(17)
OTHER INFORMATION: 2'-O-methyl
FEATURE:
NAME/KEY: misc_feature
LOCATION: (18)..(18)
OTHER INFORMATION: 2'-deoxy-2'-fluoro
FEATURE:
NAME/KEY: misc_feature
LOCATION: (19)..(19)
OTHER INFORMATION: 2'-O-methyl

FEATURE:
NAME/KEY: misc_feature
LOCATION: (20)..(21)
OTHER INFORMATION: n stands for thymidine
FEATURE:
NAME/KEY: misc_feature
LOCATION: (21)..(21)
OTHER INFORMATION: 3'-3 attached terminal deoxyabasic moiety

XX
XX disclosure; SEQ ID NO 278; 84pp; English.
PS
XX The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siRNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

XX
XX Novel chemically synthesized double stranded short interfering nucleic
PT acid molecule that directs cleavage of cholinergic receptor muscarinic 3
PT RNA through RNA interference, useful for treating asthma.
XX
XX Disclosure; SEQ ID NO 223; 84pp; English.
XX
XX The invention relates to a chemically synthesized double stranded short
CC interfering nucleic acid (siNA) molecule (I) that directs cleavage of a
CC cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference,
CC where each strand of (I) has 19-23 nucleotides, and does not require the
CC presence of nucleotides having a 2-hydroxy group for mediating RNA
CC interference. (I) is useful for treating diseases e.g., asthma, allergic
CC rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary
CC vasoconstriction or hypertension, emphysema, irritable bowel syndrome,
CC Alzheimer's disease or urinary incontinence. (I) has increased resistance
CC towards nuclease. Double stranded short interfering nucleic acid molecule
CC was produced by solid phase oligonucleotide synthesis method. This
CC sequence represents an example of a siRNA molecule of the invention.

XX Novel chemically synthesized double stranded short interfering nucleic acid molecule that directs cleavage of cholinergic receptor muscarinic 3 RNA through RNA interference, useful for treating asthma.
PS Disclosure; SEQ ID NO 245; 84pp; English.
XX
XX The invention relates to a chemically synthesized double stranded short interfering nucleic acid (siNA) molecule (I) that directs cleavage of a cholinergic receptor muscarinic 3 (CHRM3) RNA through RNA interference, where each strand of (I) has 19-23 nucleotides, and does not require the presence of nucleotides having a 2-hydroxy group for mediating RNA interference. (I) is useful for treating diseases e.g., asthma, allergic rhinitis, sinusitis, inflammation, allergy, cystic fibrosis, pulmonary vasoconstriction or hypertension, emphysema, irritable bowel syndrome, Alzheimer's disease or urinary incontinence. (I) has increased resistance towards nuclease. Double stranded short interfering nucleic acid molecule was produced by solid phase oligonucleotide synthesis method. This sequence represents an example of a siRNA molecule of the invention.

XX Non-human animal, e.g. mouse, with abnormal expression of the muscarinic acid M3 receptor, useful for screening compounds having an effect on appetite and weight control, in particularly compounds which can be used

PT to treat obesity.

XX
PS Example 1; Page 28; 52pp; English.

CC The sequences given in AA172996-97 are primers which were used to amplify
CC a portion of the mouse M3 muscarinic receptor corresponding to the third
CC intracellular loop. The amplified sequence was used as a probe in the
CC isolation of the full length M3 muscarinic receptor genomic clone from a
CC 129SV/J mouse genomic library. This sequence was then used in the
CC generation of M3 receptor mutant mice with abnormal expression of the
CC muscarinic acid M3 receptor. Mice with abnormal expression of the
CC muscarinic acid M3 receptor are useful for screening compounds having an
CC effect on appetite and weight control, in particularly compounds which
CC can be used to treat obesity

PT Identifying genetic profile associated with a neurological, psychiatric,
PT or psychological condition, comprises: screening individuals for a
PT polymorphism in a genetic locus comprising the dopamine receptor D2
PT (DRD2) gene.

XX
PS Claim 31; SEQ ID NO 1422; 634pp; English.

CC The invention relates to a method of identifying a genetic profile
CC associated with a neurological, psychiatric or psychological condition,
CC phenotype or state including a sub-threshold neurological, psychiatric or
CC psychological condition, phenotype or state in an individual, comprising
CC screening individuals for a polymorphism in a genetic locus comprising
CC the dopamine receptor D2 (DRD2) gene. The invention also relates to a
CC genetic mutation providing a genetic marker for a neurological,
CC psychiatric, or psychological condition, state or phenotype in an
CC individual, where the presence of a 957C polymorphism is indicative of a
CC predisposition to developing a neurological, psychiatric or psychological
CC condition, phenotype or state. The compositions and methods are useful

CC for identifying a genetic profile associated with a neurological,
CC psychiatric or psychological condition. The method enables clinicians to
CC make a genetic-based diagnosis of a neurological, psychiatric or
CC psychological condition and can thereby implement treatment or
CC preventative or symptom-ameliorating protocols to reduce the adverse
CC consequences of the condition. This sequence represents a human dopamine
CC receptor D2 (DRD2) DNA oligonucleotide used in the scope of the
CC invention.

PT New oligonucleotide primers for diagnosis of genetic diseases and traits
PT in dogs - amplify specific regions of the genome containing
PT microsatellite repeats, especially for diagnosing copper toxicosis and
PT carriers.

XX
PS Claim 1; Page 18; 40pp; English.

CC This invention relates to novel oligonucleotide PCR primers which may be
CC used to identify markers associated with genetic diseases and traits in
CC dogs, in particular to diagnose genetic diseases that are not
CC phenotypically visible and to identify carriers of recessive diseases. A
CC specific application is diagnosis of copper toxicosis (CT). The invention
CC can also be used to create a genetic map of the canine genome; to
CC generate breed-specific profiles; to establish paternity and to identify
CC dogs from DNA fingerprints. The method provides rapid analysis of the
CC target sequences from only a small sample of DNA. Diagnosis can be done
CC at any time in the dog's life. The present sequence is that of a PCR
CC primer of the invention.

DR Diagnosing Sjogren's syndrome in subject, involves obtaining biological

PT sample from subject and analyzing sample of presence of antibody that

PT specifically binds membrane-associated anti-type-3 muscarinic

PT acetylcholine receptor.

XX Example 1; SEQ ID NO 2; 23pp; English.

PS The invention relates to a method for diagnosing (M1) Sjogren's syndrome

CC in a subject. The method involves obtaining a biological sample from the

CC subject, analyzing the sample for the presence of an antibody that

CC specifically binds a membrane-associated anti-type-3 muscarinic

CC acetylcholine receptor (M3R), where the presence of the antibody in the

CC sample indicates that the subject has Sjogren's syndrome. The method is

CC useful for diagnosing Sjogren's syndrome in a subject by detecting anti-

CC M3R antibodies in a biological sample, where the biological sample is a

CC fluid chosen from blood, blood serum, saliva, tears, mucus and ascites

CC fluid. The current sequence represents a primer for the RT-PCR of M3R

CC cDNA.

DR Novel isolated polypeptide comprising variant form of mouse or human SACL

PT polypeptide, and is associated with altered preference for carbohydrates

PT or other sweeteners, useful for preventing obesity, diabetes, alcoholism.

XX Claim 14; Page 86; 23pp; English.

PS The invention relates to an isolated polypeptide, comprising a variant

CC form of mouse or human SACL polypeptide. The variant form is associated

CC with altered preference for carbohydrates, other sweeteners or ethanol.

CC The polypeptide and its associated DNA sequence can be produced by

CC recombinant techniques and is useful for preventing obesity, diabetes or

CC alcoholism associated with SACL expression. The sequences are useful in

CC screening for drugs and sweeteners. Recombinant cell lines and transgenic

CC embryos may be used in screening for and identifying agents that induce

CC or repress function of SACL. Predisposition to diabetes, obesity or

CC alcoholism can be ascertained by testing any fluid or tissue of a human

CC (such as blood, pancreas or tongue) for sequence variations of the SACL

CC gene. A sequence variation of the SACL locus may indicate a

CC predisposition to diabetes, obesity and/or alcoholism and may provide a

CC diagnostic mark. The polynucleotide can be detected in a biological

CC sample by contacting the DNA with a probe to form a hybridization complex

CC which is then detected. The sequences represent cDNA encoding human and

CC mouse SACL polypeptides and PCR primers specific for the SACL genes

XX
XX New isolated polynucleotides for sensing carbohydrates, other sweeteners,
PT or ethanol, useful for screening drugs for inhibition or restoration of
PT gene function as antidiabetic, antioesity or antialcohol consumption
PT therapies.
XX
XX Example 12; SEQ ID NO 364; 148bp; English.
XX
XX The invention relates to SACL polypeptides and the polynucleotides
CC encoding them. The polynucleotides contain a variation associated with
CC sensing carbohydrates, other sweeteners or ethanol. The invention also
CC relates to a method for analysing a biomolecule in a biological sample,
CC comprising altering SACL activity in the sample and measuring the
CC activity, a method for analysing a polynucleotide in a biological sample,
CC comprising contacting a polynucleotide in a biological sample with a
CC probe where the probe hybridises to a SACL polynucleotide to form a
CC hybridisation complex and detecting the hybridisation complex, a method
CC of identifying susceptibility to obesity or diabetes comprising comparing
CC the nucleotide sequence of the suspected SACL allele with a wild type
CC nucleotide sequence, where the difference between the suspected allele
CC and the wild-type sequence identifies a sequence variation of the SACL
CC nucleotide sequence, and a method of treating or preventing obesity,
CC diabetes or alcoholism associated with expression of SACL, comprising
CC administering to a subject a pharmaceutical composition and a transgenic
CC animal that carries an altered SACL allele. The methods and compositions
CC of the invention are useful for screening drugs for inhibition or
CC restoration of gene function as antidiabetic, antioesity or antialcohol
CC consumption therapies and for identifying sweeteners and alcohols. This
CC sequence represents a PCR primer used to amplify murine SACL DNA of the
XX invention.

XX
XX Isolated cadherin-like asymmetry protein-2 polynucleotide and polypeptide
PT used to diagnose, treat and prevent autoimmune diseases and inflammatory
PT responses.
XX
XX
XX Disclosure; Page 40; 286pp; English.
XX
XX The present invention describes cadherin-like asymmetry protein-2 (CLASP-
XX 2). CLASP-2 can have immunosuppressive, immunomodulatory,
XX antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic,
XX antianaemic, haemostatic and neuroprotective activities. CLASP-2 can be
XX used to inhibit an immune response in a subject by interfering with the
XX ability of a CLASP-2 protein to bind to another T cell or B cell. An
XX immune response in a subject may also be inhibited by administering an
XX antibody which specifically binds to CLASP-2. CLASP-2 polynucleotides,
XX proteins and antibodies can be used to prevent or treat a CLASP-2
XX mediated disease, such as an autoimmune disease caused or exacerbated by
XX increased activity of Th1 cells. They can also be used to treat
XX hypersensitivities, prevent transplantation rejection responses and
XX augment immune responsiveness in immunodeficiency states, inhibit
XX proliferation and differentiation of cells involved in an inflammatory
XX response e.g, arthritis, inflammatory bowel disease and increase
XX differentiation and proliferation of haematopoietic cells e.g. to treat
XX anaemia, thrombocytopaenia and other blood protein disorders. Disorders

CC treated by disrupting CLASP-2 function include multiple sclerosis,
 CC rheumatoid arthritis, endometriosis and pregnancy induced hypertension.
 CC The present sequence represents a human CLASP probe/primer, given in the
 CC present invention

 CC
 CC PT New human cadherin-like asymmetry protein(s) (CLASP)-2 for modulating an
 CC immune response, and for treating multiple sclerosis, rheumatoid
 CC arthritis, endometriosis, lupus, autoimmune thyroiditis, septic shock,
 CC and sepsis.
 CC
 CC PS Disclosure; Page 39; 245pp; English.
 CC
 CC XX The invention relates to an isolated polypeptide (I) comprising an amino
 CC acid sequence that has 90 % sequence identity to one of the human
 CC cadherin-like asymmetry protein(s) (CLASP)-2 (hCLASP-2a, 2B, 2C, 2B)
 CC sequences (PS). (I) is useful for identifying a compound or agent that
 CC binds CLASP-2 polypeptide. An antibody (II) to (I) is useful for
 CC detecting a CLASP-2 polypeptide in a sample. (II) is useful for
 CC inhibiting a immune response in a subject. A pharmaceutical composition
 CC comprising a nucleic acid encoding (I), or (II) is useful for preventing
 CC or treating a CLASP-2 mediated disease e.g. an autoimmune disease, where
 CC the autoimmune disease is caused or exacerbated by increased activity of
 CC TH1 cells. CLASP-2 polynucleotides are useful as probes or primers for
 CC detection or inhibition of CLASP-2 expression (e.g., antisense or
 CC ribozyme-mediated inhibition), for gene knockout, etc. The CLASP-2

CC polynucleotides can express CLASP-2 polypeptides, produce anti- CLASP-
 CC antibodies or are used as therapeutic polypeptides. The CLASP-2
 CC polynucleotide or fragments can be used in diagnostics (e.g., as probes
 CC for CLASP-2 expression), as a lymphocyte marker and for therapeutic
 CC purposes. CLASP-2 polynucleotides can construct transgenic and knockout
 CC animals, e.g., for screening of CLASP-2 agonists and antagonists. CLASP-2
 CC polynucleotides can screen for CLASP-2 agonists and antagonists. CLASP-2
 CC polypeptides or polynucleotides can treat deficiencies or disorders of
 CC the immune system, by activating or inhibiting the activation,
 CC differentiation of immune cells and can treat or detect deficiencies or
 CC disorders of haematopoietic cells. CLASP-2 polypeptides or
 CC polynucleotides can increase differentiation and proliferation of
 CC haematopoietic cells, including the pluripotent stem cells to treat those
 CC disorders associated with a decrease in certain (or many) types of
 CC haematopoietic cells e.g., immunologic deficiency syndromes including
 CC blood protein disorders (e.g., agammaglobulinemia,
 CC dysgammaglobulinemia, ataxia telangiectasia, common variable
 CC immunodeficiency, Digorge syndrome, lymphopenia, thrombocytopenia, or
 CC haemoglobinuria). CLASP-2 polynucleotides or polypeptides can treat or
 CC detect autoimmune diseases, e.g., Addison's disease, haemolytic anaemia,
 CC endometriosis, autoimmune thyroiditis, and autoimmune pulmonary
 CC inflammation. CLASP-2 can be used to treat anaphylaxis or
 CC hypersensitivity to an antigenic molecules, organ rejection or graft-
 CC versus-host disease (GVHD) and inflammation. ABK84922-ABK85018 represent
 CC cadherin-like asymmetry protein (CLASP) coding sequences and PCR primers

 DR
 XX Identifying genetic profile associated with a neurological, psychiatric,
 PT or psychological condition, comprises screening individuals for a
 PT polymorphism in a genetic locus comprising the dopamine receptor D2

PT (DRD2) gene.
 XX Claim 31; SEQ ID NO 1421; 634pp; English.
 XX The invention relates to a method of identifying a genetic profile
 CC associated with a neurological, psychiatric or psychological condition,
 CC phenotype or state including a sub-threshold neurological, psychiatric or
 CC psychological condition, phenotype or state in an individual, comprising
 CC screening individuals for a polymorphism in a genetic locus comprising
 CC the dopamine receptor D2 (DRD2) gene. The invention also relates to a
 CC genetic mutation providing a genetic marker for a neurological,
 CC psychiatric, or psychological condition, state or phenotype in an
 CC individual, where the presence of a 957C polymorphism is indicative of a
 CC predisposition to developing a neurological, psychiatric or psychological
 CC condition, phenotype or state. The compositions and methods are useful
 CC for identifying a genetic profile associated with a neurological,
 CC psychiatric or psychological condition. The method enables clinicians to
 CC make a genetic-based diagnosis of a neurological, psychiatric or
 CC psychological condition and can thereby implement treatment or
 CC preventative or symptom-ameliorating protocols to reduce the adverse
 CC consequences of the condition. This sequence represents a human dopamine
 CC receptor D2 (DRD2) DNA oligonucleotide used in the scope of the
 CC invention.

 XX Identifying genetic profile associated with a neurological, psychiatric,
 PT or psychological condition, comprises screening individuals for a
 PT polymorphism in a genetic locus comprising the dopamine receptor D2
 PT (DRD2) gene.
 XX Claim 31; SEQ ID NO 1423; 634pp; English.
 PS
 XX The invention relates to a method of identifying a genetic profile
 CC associated with a neurological, psychiatric or psychological condition,

CC phenotype or state including a sub-threshold neurological, psychiatric or
CC psychological condition, phenotype or state in an individual, comprising
CC screening individuals for a polymorphism in a genetic locus comprising
CC the dopamine receptor D2 (DRD2) gene. The invention also relates to a
CC genetic mutation providing a genetic marker for a neurological,
CC psychiatric, or psychological condition, state or phenotype in an
CC individual, where the presence of a 957C polymorphism is indicative of a
CC predisposition to developing a neurological, psychiatric or psychological
CC condition, phenotype or state. The compositions and methods are useful
CC for identifying a genetic profile associated with a neurological,
CC psychiatric or psychological condition. The method enables clinicians to
CC make a genetic-based diagnosis of a neurological, psychiatric or
CC psychological condition and can thereby implement treatment or
CC preventative or symptom-ameliorating protocols to reduce the adverse
CC consequences of the condition. This sequence represents a human dopamine
CC receptor D2 (DRD2) DNA oligonucleotide used in the scope of the
CC invention.

PT Genetic testing for detecting genetic polymorphisms, by allowing nucleic
PT acid sample having an anchor sequence at its 5' end to hybridize to a
PT support having a probe containing a sequence that is complementary to the
PT target sequence.
XX
PS Example 1; SEQ ID NO 14; 19pp; English.
XX
CC The present invention provides a method of genetic testing for detecting
CC genetic polymorphisms. The method involves hybridizing a nucleic acid sample
CC having an anchor sequence at its 5' end to hybridize to a support having,
CC immobilized on its surface, a probe containing a sequence that is
CC complementary to the target sequence; extending the complementary strand
CC from the probe utilizing the nucleic acid sample as a template;
CC dissociating and removing the nucleic acid sample from the extended probe
CC ; extending a complementary strand using the extended probe as a template

CC and a primer having a sequence identical to the anchor sequence and
CC detecting pyrophosphoric acid generated via the primer extension based on
CC bioluminescence. The present sequence is the human gene 7 amplifying PCR
CC primer. This sequence is used in the method of genetic testing for
CC detecting genetic polymorphisms.

 PT Detection of single nucleotide polymorphisms in genomes by preparation
 PT and analysis of reduced complexity genomes, useful for genotyping,
 PT fingerprinting and determining allele frequency of SNPs.
 XX
 PS Disclosure; Page 56; 11pp; English.
 XX
 CC A method has been developed for detecting the presence or absence of a
 CC single nucleotide polymorphism (SNP) allele in a genomic sample. The
 CC method comprises preparing a reduced complexity genome (RCG) from the
 CC genomic sample and analysing the RCG for the presence or absence of a SNP
 CC allele. The method can be used to characterise a tumour, to generate a
 CC genomic pattern for an individual genome or to generate a genomic
 CC classification code for a genome. The method can be used to assess
 CC whether a subject is at risk for developing a disease or to identify a
 CC set of SNP alleles associated with a disease. The method can also be used
 CC to perform linkage analysis. AAA35944 to AAA35947 represent sequences
 CC used in the exemplification of the present invention. AAA35948 to

 PT Isolated nucleic acid molecules having polymorphisms in known human genes
 PT e.g. cytochrome P450 and cathepsin S useful as genetic linkage markers
 PT for locating, identifying and characterizing the genes responsible for
 PT disorder-related traits.
 XX
 PS Example 14; Page 125; 714pp; English.
 XX
 CC This invention relates to the sequence of an isolated nucleic acid
 CC molecule comprising at least one base variation from that of a known
 CC human cytochrome P450 A1 (CYP4501A1), cytochrome P450 A2 (CYP4501A2),
 CC cytochrome P450 O2E1 (CYP45002E1), adrenergic receptor beta1 (ADBR1),
 CC aryl hydrocarbon (AHR), aryl hydrocarbon receptor nuclear translocator
 CC (ARNT), cathepsin S (CTSS), cyclooxgenase 2 (COX2), diazepam binding
 CC inhibitor (DBI), epoxide hydroxylase 2 (EPHX2), 5-lipoxygenase activating
 CC protein (FLAP), glutathione-S-transferase 12 (GST12), histamine-N-methyl
 CC transferase (HNMT), (Kallikrein 2) KLK2, nicotinamide-N-methyl
 CC transferase (NNMT), NADPH quinone oxidoreductase 2 (NQO2),
 CC sulfoxtransferase thermolabile (STM), UDP-glucuronosyl transferase 2B4
 CC (UGT2B4), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl
 CC transferase (UGT2B15), urokinase receptor (uPA), multidrug resistance 1
 CC (MDR1), lactotransferrin (LTF), multidrug resistance associated protein 3
 CC (MRP3), orphan nuclear receptor (NR112), or acetylcholine muscarinic
 CC receptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence.
 CC The polymorphisms in the human genes cited in the invention are useful as
 CC genetic linkage markers for locating and characterising the genes that
 CC are responsible for specific traits within the genome and eventually
 CC identifying the genes responsible for a variety of disorder-related
 CC traits as a result of their e.g., overexpression, constitutive
 CC expression, mutation or underexpression, which may be used in diagnosing
 CC and/or treating the disorders. The nucleic acid molecules comprising the
 CC polymorphic sequences contained in CYP4501A1, CYP4501A2, CYP4502E1,
 CC ARNT, EPHX2, GST12, NNMT, NQO2, NR112, STM, UGT2B4, UGT2B7, UGT2B15, AHR,
 CC MDR1 and/or MDR3 are useful for screening individuals for altered drug
 CC metabolism. The polymorphic sequences contained in CYP4501A1, CYP4501A2,
 CC AHR, MDR1 and/or MDR3 may also be used to screen individuals for
 CC susceptibility to cancer. Polymorphic sequences in ADRB1 or CHMR2 are
 CC used to screen for altered cardiovascular function, in COX2 for altered
 CC susceptibility to colorectal tumours, in DBI or CHMR1 for altered central
 CC nervous system function, in FLAP and HNMT for altered pulmonary,
 CC immunological or haematological function, in KLK2 for altered serine
 CC protease activity in the prostate, in LTF for altered immunological or
 CC haematological function, in CHMR3, CHMR4 or CHMR5 for altered central and
 CC peripheral nervous system function. The present sequence represents a PCR
 CC primer used to amplify the sequences of the invention

XX PT gene/function of protein encoded by RecQ DNA helicase-family gene, as
XX PT active ingredient.
XX
XX Claim 10; SEQ ID NO 46; 262pp; Japanese.
XX
XX This invention describes a novel anticancer apoptosis inducing agent
XX which comprises (a) compound, which suppresses the double-stranded RNA
XX helicase-family gene, (b) DNA which expresses the double-stranded RNA
XX with RNA interfering (RNAi) effect with respect to RecQ DNA helicase-
XX family gene, or (c) a compound, which suppresses the function of protein
XX encoded by RecQ DNA helicase-family gene, as an active ingredient. The
XX invention also describes a method for screening for a candidate compound
XX with a protein encoded by RecQ DNA helicase-family gene. A compound,
XX which suppresses the expression of RecQ DNA helicase-family gene is a
XX transcription product or antisense nucleic acid of one part of RecQ DNA
XX helicase-family gene, or a nucleic acid which has ribozyme activity which
XX cleaves the transcription product of RecQ DNA helicase-family gene
XX specifically. It can also be a RecQ DNA helicase-family protein variant
XX which has dominant negative character with respect to the protein encoded
XX by RecQ DNA helicase-family gene, an antibody or a low molecular compound
XX coupled with the protein encoded by RecQ DNA helicase-family gene. The
XX RecQ DNA helicase-family gene is a WRN gene, BLM gene or RecQL gene. The
XX method of the invention is useful for manufacturing an anticancer agent
XX as a pharmaceutical composition. The novel agent is highly safe,
XX effective and does not cause any side effects when used as a
XX pharmaceutical. The products of the invention have cytostatic activity.
XX This sequence represents a double stranded siRNA (small interfering RNA)
XX molecule which is targeted to the RecQ1 gene.

XX Providing antisense therapy that reduces expression of clusterin.

XX comprising administering an anti-clusterin antisense oligonucleotide to a

XX patient in need of treatment for cancer expressing clusterin.

XX Claim 6; SEQ ID NO 5; 37pp; English.

XX The invention describes providing (M1) antisense therapy, which reduces

XX the expression of clusterin to provide therapeutic benefits in the

XX treatment of cancer. The method comprises administering 40-640 mg of anti

XX -clusterin antisense oligonucleotide to a patient in need of treatment

CC for a cancer expressing clusterin. Also described are: an antisense
CC containing pharmaceutical composition (I) packaged in dosage unit form,
CC comprising an anti-clusterin antisense oligonucleotide, where the amount
CC of anti-clusterin antisense oligonucleotide in each dosage unit ranges
CC from 40-640 mg, and use of anti-clusterin antisense (II) in the
CC manufacture of a medicament for the treatment of cancer, where the
CC medicament is formulated to deliver a dosage of 40-640 mg of the
CC antisense to a patient. (M1) Is useful for providing antisense therapy
CC for treatment of cancer chosen from prostate cancer, bladder cancer,
CC ovarian cancer, lung cancer (preferably non-small cell lung cancer),
CC renal cancer, melanoma, pancreatic cancer, metastases and cancer with
CC lymph node involvement, in a patient. (II) Is useful in the manufacture
CC of a medicament for the treatment of cancer. This sequence represents an
CC anti-clusterin antisense oligonucleotide.

PT Medical device useful for reducing fibrotic tissue formation comprises a
PT substrate, and active agent associated with the substrate.

PS Example 2; SEQ ID NO 2; 27bp; English.

CC The present invention relates to medical device useful for reducing
CC fibrotic tissue formation. The invention also provides a method for
CC delivering an active agent to a subject. The method involves providing a
CC medical device that includes a substrate and an active agent suppresses
CC the production and/or activity of telopeptide lysyl hydroxylase (TLH)
CC enzyme in collagen-producing cells associated with the substrate. The

CC substrate comprises a polynucleotide delivery matrix (DNA encoding
CC antisense, ribozyme, siRNA molecules) that interfere with a PLOD2 gene
CC and inhibit the translation of a TLH enzyme. The present sequence is a
CC human PLOD2 gene specific antisense siRNA.

PT Reducing or preventing fibrotic tissue formation in a subject, comprises
PT delivering a polynucleotide that suppresses production and/or activity of
PT telopeptide lysyl hydroxylase enzyme.

PS Example 1; SEQ ID NO 2; 26bp; English.

CC The invention relates to a method (M1) for reducing or preventing
CC fibrotic tissue formation in a subject. (M1) comprises delivering a
CC polynucleotide that suppresses telopeptide lysyl hydroxylase (TLH) enzyme
CC production/activity in collagen-producing cells, where the polynucleotide
CC has a small interfering RNA (siRNA) molecule or DNA encoding siRNA that
CC interferes with the PLOD2 (telopeptide lysyl hydroxylase) gene and
CC inhibits TLH enzyme translation, or interferes with a gene encoding a
CC protein in production/processing of the enzyme. Also described is a kit
CC comprising components for the formation of a polynucleotide delivery
CC matrix. (M1) is useful for reducing or preventing fibrotic tissue
CC formation in subject, where the fibrotic tissue formation is associated
CC with heart rhythm disorder, heart failure, valve disease, vascular
CC disease, diabetes, neurological diseases and disorders or surgery, and

 PS

Primer PPR2A8 was used in the PCR amplification of herpesvirus entry
 CC protein B (HvEB) cDNA (see also AA235084). HvEB is a novel member of the
 CC human tumour necrosis factor receptor family that mediates entry of an
 CC alphaherpesvirus (AHV) into cells. Cellular herpesvirus entry proteins
 CC (I) such as HvEB, their mutants, homologues, derivatives, variants and
 CC active fragments are claimed, as are recombinant cells (especially CHO,
 CC murine melanoma, swine testes), vectors, and anti-cellular herpesvirus
 CC protein compounds (II). Suitable (II) include antisense oligonucleotides,
 CC antibodies specific for (II), peptides and peptidomimetics. Methods of
 CC identifying (II), of inhibiting entry of an AHV into a cell using (II),
 CC and of treating an AHV infection in an animal, especially a human, using
 CC (II) are also claimed

 DR

Identifying genetic profile associated with a neurological, psychiatric,
 PT or psychological condition, comprises screening individuals for a
 PT polymorphism in a genetic locus comprising the dopamine receptor D2
 (DRD2) gene.
 XX

Claim 31; SEQ ID NO 1420; 634pp; English.
 PS

The invention relates to a method of identifying a genetic profile
 CC associated with a neurological, psychiatric or psychological condition,
 CC phenotype or state including a sub-threshold neurological, psychiatric or
 CC psychological condition, phenotype or state in an individual, comprising
 CC screening individuals for a polymorphism in a genetic locus comprising
 CC the dopamine receptor D2 (DRD2) gene. The invention also relates to a
 CC genetic mutation providing a genetic marker for a neurological,
 CC psychiatric, or psychological condition, state or phenotype in an
 CC individual, where the presence of a 957C polymorphism is indicative of a
 CC predisposition to developing a neurological, psychiatric or psychological
 CC condition, phenotype or state. The compositions and methods are useful
 CC for identifying a genetic profile associated with a neurological,
 CC psychiatric or psychological condition. The method enables clinicians to
 CC make a genetic-based diagnosis of a neurological, psychiatric or
 CC psychological condition and can thereby implement treatment or
 CC preventative or symptom-ameliorating protocols to reduce the adverse
 CC consequences of the condition. This sequence represents a human dopamine
 CC receptor D2 (DRD2) DNA oligonucleotide used in the scope of the
 CC invention.

PT Identifying or quantifying organisms or genes, useful e.g. for diagnosis,
PT by detecting specific nucleotide sequences present among several
PT homologous sequences.
XX
PS Example 12; Page 40; 56pp; English.
XX
CC The present invention provides a method of identifying or quantitating a
CC microorganism in a sample by detecting its nucleotide sequence from
CC amongst homologous sequences. The method can be used to detect
CC microorganisms and polymorphisms, and to diagnose genetic diseases
CC including cancer. The present sequence is a capture oligonucleotide used
CC in the exemplification of the invention
